FS 1
FIELD STUDY

ON BECOMING A TEACHER

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

Episode 2 provides me with an opportunity to observe learners of different ages and grade levels. It highlights the differences in their characteristics and needs as a future teacher. It is important for me to determine of learners characteristics and needs so that I will be able to plan and implement learning activities and assessments that are all developmentally appropriate.

TARGET Your Intended Learning

- The end of this episode I must be able to describe the characteristics, needs and interest of learners from different developmental levels. (PPST 3.1.1).

REVISIT the learning Essentials

Here are major principles of developmental relevant to this episode.

1. Development is relatively orderly. Development follows directional patterns, such as from the head to the toe (cephalocaudal) and from the center of the body then outwards (proximodistal).
2. Development takes place gradually.
3. All domains of development and learning - physical, social, and emotional, and cognitive - are important and they are closely interrelated. (NAEYC, 2009)
4. Development proceeds toward greater complexity, self-regulation, symbolic or representational capabilities. (NAEYC, 2009)

OBSERVE, ANALYZE, REFELCT

Activity 2.1 **Observing learner characteristics at different stages**

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

Name of the FS Student: **Jewel B. Octa**

Course: **BSED Major in Sciences** Year and Section: **4-A**

Resource Teacher 1: **Rommel B. Maninang Jr.** Signature: Date: **Aug. 20, 2026**

To realize the **Intended Learning Outcome**. Work my way through these steps:

Step 1 Observe 3 groups of learners from different levels (preschool elementary and high school).

Step 2 Describe each of the learners based on my observations.

Step 3 Validate by observation by interviewing the learners.

Step 4 compared them in terms of their interest and needs

OBSERVE

Use the **observation guide and matrices** provided for you to document your observations.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

An Observation Guide for the Learner's Characteristics

Read the following statements carefully, then write your observation report on the provided is pace. Your teacher may also recommend another observation checklist if a more detailed observation is preferred.

Physical

1) Observe their gross motor skills, how they carry themselves, how they move, walk, run, go up the stairs, etc.
2) Our gross movements, clumsy or deliberate/smooth?
3) How about their fine motor skills? Writing, drawing, etc.

Social

1) Describe how they interact with teachers and other adults.
2) Note how they also interact with peers. What do they talk about? What are their concerns?

Emotional

1) Describe the emotional, disposition or temperament of the learners. (happy, sad. easily cries, mood shifts)
2) How do they express their wants/needs? Can they wait?
3) How do they handle frustrations?
4) Describe your level of confidence as shown in their behavior. Are they self-conscious?

Cognitive

1) Describe their ability to use words to communicate their ideas. Note their language proficiency.
2) Describe how they figure out things. Do they comprehend easily? Look for evidence of their thinking skills.
3) Where their opportunities for problem solving? Describe how they showed problem solving abilities.

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

Learners' Development Matrix

Record the data you gathered about the learners' characteristics and needs in this matrix. This will allow you to compare the characteristics and needs of learners at different levels. The items under each domain. Are by no means exhaustive. These are just sample indicators. You may add other aspects which you may have observed.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

Development Domain	**Preschooler** Indicate age range of children observed: __	**Elementary.** Indicate age range of children observed:**6-11 Years old**	**High school.** Indicate age range of children observed: **12-16 Years Old**
Physical Gross motor skills. Fine motor skills. Self help skills Others.	**N/A**	During my observation, I noticed that elementary students are full of energy. They like to walk around, talks a lot, run every where and most importantly they are free-spirited. They like to explore and experience everything and they get to do whatever they want to. Elementary students in terms of fine motor skills, most students are already displaying creativity by drawing their favorite fruits, their family, their favorite cartoon characters, and other things that stimulates their creativity. I also noticed during the lesson, elementary students actively participate in discussions, showing their enthusiasm and attentiveness. And lastly, in their self-	High School students, in terms of their gross motor skills, students have different interests in physical activities. Some students like volleyball, basketball, or badminton. While others prefer peace and quiet or walking, other light exercises during their free time. They show more refined physical abilities than the elementary students. Their interest varies accordingly. For their fine motor skills, they can read and write quickly and more detailed. They also utilize resources such as gadgets in learning. I also noticed that their attention span and focus is higher than elementary students. Lastly, their self-help skill is way better than elementary students. High school

		help skills, they can arrange and organize their own things, they can carry their own school bags, they can go to the toilet on their own which proves that they can independently do simple responsibilities.	students can independently manage their personal responsibilities like creating their own project, managing their things and maintaining their personal hygiene.
Social Interaction with teachers. Interaction with classmates/Friends. Interest. Others.	**N/A**	The students are very friendly. All students are friends with each other. They play together, eat together, exchange stories, laugh together, and they are always together all throughout the day. The students also greet teacher whenever they see one. But most importantly, I noticed that these elementary students have a strong bond with each other which proves that they enjoy each other's company because they share common interests which are playing and exploring.	The students generally have good relationship with their teachers and peers. However, I noticed that they have their own circle of friend that they always spend time with. They prefer hanging out with their close friends but that does not mean that they do not like other students. From what I can see, they are comfortable hanging out with their preferred group of friend because they share the same interests, they help each other and they have better connection with each other. Even if they

			have different group of friends, in the classroom, they still interact with other classmates and help one another with academic tasks.
Emotional Moods and temperaments, Expression of feelings. Emotional independence. Others.	**N/A**	I noticed that elementary students' mood can change quickly. One moment they are happy and the next time you see them they are upset or angry. This is common for young children who are are still navigating their emotion spectrum and learning how to manage each emotion. They express their emotions openly, whenever they feel happy, they scream, laugh, and run. And whenever they feel sad, they cry or stay quiet or they throw tantrums. This is the stage where they are still dependent on their parents. This is the time where they need guidance and comfort the most.	During this time, High School students are going through early adolescence wherein they have stronger and more complicated emotions. I observed that some are more reserved, quiet and keep their feelings to themselves. This is also the time where they explore various things independently-a way of navigating their lived on their own.

Cognitive Communication skills. Thinking skills. Problem solving skills. Others.	**N/A**	The elementary students are very talkative. They can say everything on their mind which proves that they are expressive and has explicit communication skill. The students are confident which allows them to take part in every classroom activity, enjoy and socialize. Their thinking skill is evident in every activity that partakes as their creativity shines through in their imagination and their drawings. They always produce unique and creative ideas and create engaging stories that show their ability to think both critically and creatively. And lastly, it is not hard to notice their problem-solving skill. These students are quick to come up with creative, unique and effective solutions in every challenge the	From what I have observed particularly in Grade 9 students, I saw that they have good communication skill. They can express their thoughts and feelings efficiently with confidence. In terms of thinking skills, I noticed that students are able to breakdown broad ideas to easily understand concepts and process information on their own. And when it comes to their problem-solving skill, they are capable of doing things on their own. They can generate ideas, find solutions and take action on their own. High school students are capable of doing things on their own.

		face in a day-to-day basis. Their problem solving skill is out commendable because sometimes even an adult could not come up with such unique idea.	

ANALYZE

Write the most salient developmental characteristics of the learners you observe. Based on these characteristics, think of implications for the teacher.

Example:

Level	Salient characteristics observed	Implications to the Teaching-Learning process
Preschool Age range of learners observed 3-4	• Preschoolers like to move around a lot.	• Therefore, the teacher should remember to use music and movement activities not just in PE, but in all subject areas. • Therefore, teachers should not expect preschoolers to stay seated for a long period of time.
Level	**Salient characteristics observed**	**Implications to the Teaching-Learning process**
Preschool Age range of learners observed ____	**N/A**	**N/A**
Elementay	• Elementary students are full of curiosity and asks questions a lot.	Children are naturally curious because they are still in the early stage. They want

Age range of learners observed ____	• They are free-spirited • They are creative, enjoys drawing, writing and other activities that stimulate creativity. • They require more attention and guidance.	to know everything that is why they ask so many questions. The teacher should have lots of patience and encourage inauiry-based learning to maximize the curiosity of the students. The teacher could also use gamed and other fun activities that stimulates creativity in order for every learning session to become fun and more meaningful. Lastly, since children of this age are still learning about almost everything in life, teachers should guide, give attention, set clear routines and create a supportive classroom environment so that these children feel safe.
High School Age range of learners observed ____	• More independent • Have good communication skills • They value friendship and sharing common interests • There are different personalities inside the classroom	High school students are more independent. They are in a stage where they want to do things on their own, experience and learn new things. The teacher should support the autonomy by shifting from traditional teaching method, offering choices in learning, fostering critical thinking, and providing a safe, respectful environment where students have full authority to their academic and personal growth. The teacher should also maximize these characteristics of the students and make it the baseline of their instrutional method in order to provide high quality education that does not compromise the interest and the personality of the students.

REFLECT

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

1) While you were observing the learners, did you recall your own experience? Says when you were their age? What similarities or differences do you have with the learners you observe?
   - **As I observe the elementary students, I could not help but to compare myself to them when I was in elementary school. As I watch the elementary students play, talk and move freely, I realized that they are so different and I wish that I was as confident and free like these kids are. Back then, I was so shy that I could not participate to classroom activities. I admire these kids so much because they are so free and confident on their own skin. I wish I had the same confidence back then.**
2) Think of a teacher you cannot forget for positive or negative reasons. How did she/he help or not help you with your needs (physical, emotional, social and cognitive)? How did it affect you?
   - **The most unforgettable teacher I had was Ma'am Dasco. She was a science teacher from when I was in Grade 7. At first, I was worried and hesitant to participate in her class because I have heard so many things about her. But that one Science experiment changed everything for me. I used to be so shy and was too shy to participate in any class activities but Ma'am Dasco called me to answer the question in our Science experiment. As I was about to answer, my hands were shaking and my knees are trembling but I managed to read my answer and surprisingly all of my answers were correct. That earned me praises from her. But that did not end there, Ma'am Dasco called other students to answer the remaining questions but she was not satisfied with their answer and I volunteered to answer and my answers were correct. She said "Very good, Miss Octa". I gained a lot of confidence after that day.**

3. Share your insights here.

- **From my observation, I realized how crucial it is for teachers to go beyond academics and consider other causes to help the students build their confidence, express themselves and discover their potential. As I watch the students, I saw their potential, they dedication and confidence—a product of supportive and healthy environment. My unforgettable teacher taught me that teachers have the power to change a student's life forever. They have the ability to alter a child's life by providing encouragement, emotional support, and guidance. As a future teacher, I want to use my power to change a child's life for the better. I want to be the teacher they will not forget for a good reason. I want to be theier guiding light to the future that they want and they deserve.**

Which is your favourite theory of development. How can this guide you as a future teacher? Clip some readings about this theory and paste them here.

- **Behaviorism is the theory of development that I find most meaningful because it emphasizes how a person's behavior can be shaped through experiences, the environment, reinforcement, and consequences. According to behaviorist theorists such as B.F. Skinner, behaviors that are reinforced are more likely to be repeated, while behaviors that receive negative consequences are less likely to occur. What I appreciate most about this theory is its practical approach to learning. It shows that students can develop positive behaviors and improve their performance when they receive appropriate encouragement, feedback, and reinforcement.**

  As a future teacher, I believe behaviorism can help me create a positive and supportive classroom environment. I can use rewards, praise, constructive feedback, and other forms of positive reinforcement to encourage students to participate, complete their tasks, and develop good learning habits. However, I also understand that every student is different, so reinforcement should not only focus on rewards but should help students recognize the value of their own progress. This theory reminds me that my actions and the classroom environment can greatly influence my students' behavior and learning.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 2 Learner Diversity: Developmental Characteristics, Needs and Interests

Ultimately, behaviorism has taught me that becoming a teacher is not only about delivering lessons but also about helping students develop positive behaviors and attitudes toward learning. As a future teacher, I want to use reinforcement responsibly and consistently while treating my students with patience and understanding. I hope to create a classroom where students feel encouraged to learn, make mistakes, improve, and continue trying. Through this approach, I can help my future students build confidence and develop habits that will benefit them both inside and outside the classroom.
