Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

SPARK Your Interest

Episode 3 provides an opportunity to observe how differences in gender, racial, cultural and religious backgrounds, including coming from indigenous people, influenced learner behavior interaction and performance in school. One will also analyze and reflect on practices that teachers use in leveraging diversity in the classroom. It also provides an opportunity to observe how differences in abilities. Affect interaction in his school and learn about the strategies that teachers use in addressing the learners needs toward effective teaching and learning.

TARGET Your Intended Learning

At the end of this Episode, I must be able to:

- Describe the characteristics and needs of learners from the diverse backgrounds;
- Identify the needs of students with different levels of abilities in the classroom;
- Identify the best practices in differentiated teaching to suit the varying learner needs in a diverse class (PPST 3.1.1); and
- Demonstrate openness, understanding and acceptance of the learners diverse needs and backgrounds.

REVISIT the Learning Essentials

Here are principles and concepts relevant to this episode:

1. Principles of development
   a. Development and learning proceed at varying rates from child to child as well as at uneven rates across different areas of the child's functioning. (NAEYC, 2019)
   b. Development and learning are maximized when learners are challenged to achieve at a level just above their current level of mastery. And also when they have many opportunities to practice newly acquired skills.

c. Differentiated instruction is a student-centered approach that aims to match the learning, content, activities and assessment to the different characteristics, abilities, interest, and needs of the learners.

2. The PPST highlighted the following factors that bring about the diversity of learners:
   a. Differences in learners gender, needs, strengths, interests, and experiences.
   b. English linguistic, cultural, socio-economic and religious backgrounds
   c. Learners with disabilities, giftedness, and talents.
   d. Learners under challenging circumstances, circumstances which include geographic isolation, chronic illness, displacement due to armed conflict, urban resettlement or disasters, child abuse, and child labor.

Effective teachers are knowledgeable about how issues related to the factors mentioned affect learners. The teachers developed in them **sensitivity** and **empathy**. They remember that the learners respond and perform at different levels. The teachers are sure the students that their **gender identity, culture and religion are respected their strengths are recognized** and their **needs will be met**. These teachers declare to all that **everyone has the chance to learn and succeed**. They create a learning community where everyone can work together and contribute regardless of their abilities, capacities, and circumstances.

Teachers who **celebrate** and **leverage student diversity** in the classroom:

- Use strategies to build a caring community in the classroom.
- Model, respect and acceptance of different cultures and religions
- Bring each of the student's home culture and language into the shared culture of the school.
- Provide more opportunities for cooperation than competition.

3. Focus on **indigenous peoples**

   A young teacher approach to indigenous peoples starts with a keen awareness of one's own identity, including one's beliefs and cultural practices. True serious reflection. One may realize that the self is a product of all the influences of key people in one's life and the community, real and virtual. Similarly, learners from indigenous groups carried with them their beliefs, views and cultural practices. One's attitude needs to be that of openness and respect. Come in **not** with the view that one's own culture is superior. We approach with a sincere willingness. And deep interest to know and understand the indigenous people's culture. We aim to make teaching learning **facilitative rather than imposing.**

   a. From your professional education subjects/courses, most likely you have discussed indigenous peoples in the Philippines. You learn that our country has about **110 ethno-linguistic groups**, majority of which is in Mindanao, some in Northern Luzon and fewer in the Visayas. (UNDP Philippines, 2010). They represent about 10 to 20% of our total population. There are two big indigenous peoples groups which have several smaller ethnic groups within them, the non-muslim groups called the **Lumads**

in Mindanao, and the **Igorots** Northern Luzon. Among others, we have the Badjaos, Ati and Tumandok, Mangyans, and Aetas.

b. Republic Act 8371 (1997), **the indigenous Peoples Rights Act**, recognizes and protects the rights of indigenous cultural communities (ICC) and Indigenous peoples (IP). Our country was admired by other nations for enacting this law. However, years later so, much still has to be done to improve the lives of millions of people from indigenous groups. (Reyes, Mina and Asis, 2017)

c. Guided by RA 8371, in 2015 DepEd issued DO 32, s.2015, adapting the **Indigenous Peoples Education (IPED) Curriculum framework**. Most useful for you as a future teacher to remember are the **5 Key Elements of the Indigenous Peoples Education Curriculum** (DO 32, s.2015 enclosure, pp.15-18):

1. **Curriculum Design**, **Competencies and Content**. Interfacing the national curriculum with Indigenous Knowledge Systems and Practices (IKSPs) and Indigenous Learning Systems (ILS). The design of a culturally appropriate and responsive curriculum has the following features:
   a. Anchors the learning context on the ancestral domain, the community's world view, and its indigenous cultural institutions.
   b. Includes and respects the community's expression of spirituality as part of the curriculum context.
   c. Affirms and strengthens indigenous culturally identity.
   d. Revitalizes, regenerates, strengthens and enriches IKSPs, ILS, and indigenous languages.
   e. Emphasizes competencies that I needed to support the development and protection of the ancestral domain, the vitality of their culture and advancement of indigenous peoples rights and welfare.
   f. Supports the Community's efforts to discern new concepts that will contribute to the Community's cultural integrity while in enabling meaningful relations with the broader society.
2. **Teaching Methodology and Strategies**. A culturally appropriate and responsive curriculum employs teaching methodologies and strategies that strengthen and enrich and complement the communities indigenous teaching-learning process.
3. **Learning Space and Environment**. A culturally appropriate and responsive curriculum recognizes that the ancestral domain where IKSPs are experienced, lived, and learned in the primary learning environment and learning space of indigenous learners.
4. **Learning Resources**. Instructional materials and other learning resources shall be developed and utilized in line with the described curriculum, content, and teaching learning process.
5. **Classroom Assessment**. Assessment shall be done utilizing tools appropriate to the standards, competencies, skills and concepts being covered, their design and use shall address the needs and concerns of the community and shall be developed with their participation.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

OBSERVE, ANALYZE, REFELCT

Activity 3.1

Observing differences among learners, gender, needs, strengths, interests and experiences; and differences among learners' linguistic, cultural, socio-economic, religious backgrounds, and difficult circumstances.

Name of the FS Student: **Jewel B. Octa**

Course: **BSED MAJOR IN SCIENCES** Year and Section: **4-A**

Resource Teacher : **Rommel B. Maninang Jr.** Signature: Date: **Aug. 20, 2026**

The learner's differences and the type of interaction they bring surely affect the quality of teaching and learning. This activity is about observing and gathering data to find out how its student diversity affects learning.

To realize the **Intended Learning Outcomes**, where you're always through these steps:

Step 1. Observed a class in different parts of his school day. (beginning of the day, class time, recess, etc.)

Step 2. Describe the characteristics of the learners in terms of age, gender, and social and cultural diversity.

Step 3. Describe the interaction that transpired inside and outside the classroom.

Step 4. Interview the resource teacher about the principles and practices that she uses in dealing with diversity in the classroom.

Step 5. Analyze the impact of individual differences on learners' interactions.

The **observation form** is provided for me to document my observations.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

OBSERVE

An Observation Guide for the Learners' Characteristics

Read the following carefully before you begin to observe. Then write your observation report on the space provided on the next page.

1) Find out the number of students gathered data as to their ages, gender, racial groups, religious and ethnic backgrounds.

During class:

1) How much interaction is there in the classroom? Describe how the students interact with one another and with a teacher. Are there groups that interact more with the teacher than others?
2) Observe the learner seated at the back and the front part of the room. Do they behave and interact differently?
3) Describe the relationship among the learners. Do the learners cooperate with or compete against each other?
4) Who are mostly students participate actively? Who among them ask for most help?
5) When is student is called and cannot answer the teacher's question, do the classmates try to help him? or do they raise their hands so that the teacher will call them instead?

Outside class:

1) How do the students grow themselves outside class? Homogeneously by age? by gender? by racial or ethnic groups? by their interests? or by the students in mixed social groupings? If so, describe the groupings.
2) Notice who are alone and those who are not interacting. Describe their behavior.

Interview the teachers and ask about their experience about learners in different circumstances. Request them to describe these circumstances and how it has affected the learners. Ask about the strategies they used to help these learners cope.

Ask the teachers about the strategies they apply to address the needs of diverse students due to the following factors.

- Gender, including LGBT

- Language and cultural differences.
- Differences in religion
- Socio-economic status.

OBSERVATION REPORT

Name of the School Observed: **Abaño Laboratory High School**
School Address: **J.Lukban Ext., Brgy II, Daet. Camarines Norte**
Date of Visit: **August 12, 2026**

During my classroom observation in our assigned Grade 9 class at Abaño Laboratory School, I was able to learn more about the students and their classroom dynamics. The class has 25 learners, aged 13 to 15 years old, with different backgrounds, identities, and experiences. Three students also shared that they have specific conditions, including poor eyesight, arthritis, and asthma. Most of the learners are Catholic, while others belong to different religious groups. Learning about these differences helped me appreciate how diverse the classroom is and how each learner has their own experiences and needs.

During the class, I noticed that the learners interacted well with one another. The assigned student discussants actively explained the lesson, while their classmates listened, asked questions, and participated in the discussion. I observed that students seated in the front and middle were more active than those at the back. Around five to seven students frequently raised their hands, while the quieter students were still able to participate when called. What stood out to me was how patient the students were with one another. When someone had difficulty answering, the discussants would reread the question, explain the topic again, and summarize the important points until the student understood.

I also noticed that the teacher was very supportive of students who struggled. Instead of immediately moving on, the teacher reread the questions and provided hints to help them arrive at the answer on their own. Outside the classroom, I observed that students naturally formed groups based on shared interests. Those who enjoyed online games often spent time together, while those who liked music formed their own groups. Their friendships seemed to be based more on common interests than on age, gender, or background. Most importantly, I did not observe anyone being isolated or left out. Overall, the experience showed me that the class has a friendly and cooperative atmosphere where students are comfortable interacting and supporting one another.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

ANALYZE

1) Identify the persons who play key roles in their relationships and interactions in the classrooms. What roles do they play? Is there somebody who appears to be the leader, a mascot/joker, an attention seeker, a little teacher, a doubter/pessimist?
   - Based on my observation of the Grade 9 students, I noticed that some naturally show leadership by reminding their classmates to behave, participate, and stay focused during discussions. However, others are more hesitant and lack confidence, even when they know the correct answer. I noticed that some are afraid to raise their hands because they doubt themselves. This made me realize that learners have different levels of confidence and may need encouragement to express themselves.

What makes the learners assume these roles? What factors affect their behavior?
- I noticed that some learners naturally take on leadership roles because they are confident, outgoing, and comfortable speaking up. Meanwhile, quieter students may hesitate even when they know the answer. I also observed that friends greatly influence participation. Students who feel supported by their classmates are more willing to speak, while those who fear being judged or laughed at often choose to stay quiet.

2) Is there anyone you observe who appear left out? Are you students who appear "different"? Why do they appear different? Are they accepted or rejected by the others? How is this shown?
   - During my observation especially during their free time, I did not see any students appeared left out. All of them get along well and interact with each other.

   What does the teacher do to address issues like this?
   - Teachers address this by making sure no learner feels left out. They encourage everyone to participate, especially quiet students, so that each learner feels included and valued.

   3. How do you spell the teacher influenced the class interaction, considering the individual differences of the students?
   - If I were to describe the teacher, I would call her a BRIDGE—Balance, Respect, Inclusion, Diversity, Guidance, and Encouragement. Like a bridge connects two sides, she brings learners together despite their different abilities and backgrounds, helping them respect, support, and learn from one another.

4.) What strategies does the teacher use to maximize the benefits of diversity in the classroom? How does the teacher leverage diversity?

- If I were to describe the teacher, I would call her a BRIDGE—Balance, Respect, Inclusion, Diversity, Guidance, and Encouragement. Like a bridge connects two sides, she brings learners together despite their different abilities and backgrounds, helping them respect, support, and learn from one another.

REFLECT

1.) How do you feel being in that classroom? Did you feel a sense of oneness or unity among the learners and between the teacher and the learner?

- During my observation, I felt that the teacher gives everyone equal opportunities and allows them to express themselves freely. I believe that the sense of security and the confidence the students feel is because the teacher provides an environment where everyone is welcome and loved. This is why the role of the teacher as the head of the classroom is important because they set the atmosphere and they are the guiding lightnof the students.

ON BECOMING A TEACHER

Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

An Observation Guide for the Learners' Characteristics

Read the following carefully before you begin to observe. Then write your observation report on the space provided on the next page.

1. Observe the class to see the differences in abilities of the learners.
2. Try to identify the students who seem to be performing well and those that seem to be behind.
3. Validate your observations by asking the teacher about the background and needs of the learners.
4. Observe the behavior of both regular students and those with special needs. Note their dispositions, Pace in accomplishing task, interaction with teacher, and interaction with others.
5. Observe the teacher's method in addressing the individual learning needs of the students in his or her class.

OBSERVATION REPORT

Name of the School Observed: **Abaño Laboratory School**
School Address: **J.Lukban Ext., Brgy II, Daet, Camarines Norte**
Date of Visit: **August 12, 2026**

During the observation, I noticed that learners have different abilities, needs, behaviors, and ways of learning. The learners observed included students from Grades 3, 8, and 10, as well as Senior High School students. Among the learners with disabilities and special needs were those with autism, developmental delays, Down syndrome, and learners who communicate through sign language. Each learner showed different levels of attention, participation, communication, and ability to accomplish tasks. Some learners required more time and guidance, while others were able to perform tasks with less assistance. This showed me that learners cannot be expected to learn at the same pace or through the same approach.

The teachers used different strategies to respond to these differences. Repetition was commonly used to help learners remember instructions and concepts, while picture association helped connect lessons with visual representations. Real or tangible objects were also used because

some learners responded better when they could see, touch, or directly experience what was being taught. Reward systems were also applied when appropriate to encourage positive behavior and participation. I observed that teachers sometimes needed to consistently use a particular method and maintain a firm but caring personality in teaching. In elementary classes, classroom management appeared to be well-established, while lessons and activities were modified according to the learners' abilities and needs.

One of the most noticeable characteristics of the learners was their difference in attention span and behavior. Some learners were easily distracted by things happening around them and needed reminders to return their attention to the lesson. Behavioral management was therefore important in helping them participate and accomplish their tasks. The teachers also demonstrated patience and unconditional care. Since some learners are particularly sensitive, the teacher needs to provide support without making the students feel that they are being judged based on their limitations. I also learned that building appropriate classroom behavior and routines may take time. Based on the observation, teachers may need several years of consistent teaching, guidance, and classroom management before students become more settled and independent in their behavior.

The observation also showed that learners with disabilities should not be viewed only according to their limitations. When appropriate interventions, teaching strategies, and support are provided, they can demonstrate their abilities and make meaningful progress. This was particularly evident among the Senior High School learners observed at STI, who showed that they could excel when the intervention and learning environment were appropriate. Their performance demonstrated that the right support can help learners develop their strengths and talents.

However, I also noticed that there are still challenges in providing an inclusive learning environment. At CNSC, there appeared to be instances of limited inclusion, such as learners with special needs being included in activities only during certain occasions, such as Nutrition Month. The environment was also not always conducive to meeting the different needs of these learners. In addition, there appeared to be no clearly implemented Individualized Education Program (IEP) for the learners observed. These observations made me realize that inclusion should go beyond simply allowing learners with disabilities to be present in regular activities. They should be given meaningful opportunities to participate, learn, interact, and develop their abilities alongside their peers.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

Overall, the observation taught me that every learner has unique strengths, challenges, interests, and learning needs. As a future teacher, I need to be patient, flexible, observant, and willing to modify my teaching strategies depending on my students. Learners with disabilities may require repetition, visual materials, tangible objects, behavioral support, or other interventions, while gifted learners and those with particular talents may need opportunities that challenge and develop their abilities further. Most importantly, I learned that when teachers provide appropriate interventions, encouragement, patience, and genuine care, learners are more capable of reaching their potential regardless of their differences.

ANALYZE

1) Did your observation match the information given by the teacher?
   - Yes, my observation matched the information provided by the teacher. The teacher explained that there are students who has autism, developmental delays, and students who cannot communicate using sign language is very evident in the classroom. Similarly, the teachers noted some students that are more challenging to handle as they required more attention and patience which perfectly aligned with my observation.
2) Describe the differences in ability levels of the students in the class? What practices or strategies are done or should be done to differentiate instruction to meet the needs of the learners?
   - In the SPED classroom at Abaño Laboratory School, I observed that students had different abilities and learning needs. The deaf students were able to participate actively and express their ideas well through sign language. Meanwhile, students with autism had difficulties with attention, impulsive behavior, and interacting with others, so they needed more guidance and support.
     The teachers used simple instructions, visual aids, repetition, and step-by-step activities to help the learners understand the lessons. One-on-one assistance and the IEP also helped address their individual needs. I noticed that group activities and peer support encouraged students to interact and develop their social skills. This experience taught me that every learner is different, and as a future teacher, I need to be patient, understanding, and flexible in the way I teach.
3) Describe the methods used by the teacher in handling the students' differences in abilities. How did the students respond to the teacher? Did the teacher use differentiated instruction? If yes, describe how.
   - The teachers addressed differences in abilities through differentiated and inclusive strategies. They adjusted lessons based on each learner's needs, provided individual guidance, encouraged peer support, and used positive reinforcement. Students who could not communicate through sign language were given other ways to participate and express themselves, while students with autism responded well to encouragement and structured support. These approaches helped create a classroom where everyone could participate, learn, and develop both academically and socially.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

REFLECT

1) Recall the time when you were in elementary or high school. Recall the high and low achievers in your class. How did your teacher deal with differences in abilities? Was your teacher effective?
   - When I was in elementary school, I once had a classmate who noticeably have harder time absorbing the lesson because he has a short span of attention and is most of the time gets distracted easily. During that time, mental disabilities are not given the attention it needed because there are little to no mental disability awareness. Hence, most of the time those students who are mentally challenged are left behind and are pushed aside and was not given the attention they needed.
   -
2) What dispositions and traits will you need as a future teacher to meet the needs of the learners?
   - I believe that as teachers, it is our duty to pay attention to the needs of each and every students we have inside the classroom because it is our duty to educated the future generation. We have to consider that every learner is different and we must find a way to meet their needs no matter how challenging it is. I believe that in order for us to be an effective teacher, we must be able to find solutions to this challenges. A teacher must be able to tend to their learners needs and that is our job.

FS 1 FIELD STUDY

ON BECOMING A TEACHER

Episode 3 Focus on Gender, Needs, Strengths, Interests, Experiences Language, Race, Culture, Religion, Socio-economic Status, Difficult Circumstances, and Indigenous People

SHOW Your Learning Artifacts

With the principle of individual differences in mind, what methods and strategies will you remember in the future to ensure that you will be able to meet the needs of both the high and low achievers in your class? Make a collection of strategies on how to address students different ability levels.

To make sure every student feels supported, I will use different strategies based on their needs. For students who need more challenge, I can give them puzzles, extra activities, or projects that help them explore topics more deeply. For those who struggle, I will break lessons into simpler steps, use pictures and examples, and give them one-on-one support.

I also want to use something my old teacher taught me—letting students learn from one another. I can pair students with different strengths so they can help each other. Through group activities, hands-on tasks, and real-life examples, I hope to make learning more enjoyable and meaningful.

Most importantly, I want my classroom to be a place where no student feels left behind. I want my students to feel confident, valued, and comfortable learning at their own pace while also learning how to support and appreciate one another.
