OBSERVATIONS OF LEARNING-TEACHING IN ACTUAL SCHOOL ENVIRONMENT

Episode 5-Creating an Appropriate Learning Environment

SPARK Your Interest

This learning Episode provides an opportunity to examine how classrooms are structured or designed to allow everyone's maximum participation for effective learning. You should be able to examine how classroom management practices affect learning. This Episode enhances the application of the theorist learned in the following professional subjects, such as Facilitating Learner-Centered Teaching and The Child and Adolescent Learners and Learning Principles.

TARGET Your Intended Learning Outcome

At the end of this Episode, I must be able to:

- Plan on how to manage time, space, and resources; and
- Provide a learning environment appropriate to the learners and conducive to learning.

REVISIT the Learning Essentials

The classroom climate that is conducive for learning is one that is non-threatening, yet business-like. It is a classroom where, when creating audio-visual presentations, the following are observed:

- Specific classroom rules and procedures are clear.
- Classroom rules and procedures are discussed within the first few days of the school.
- Students are involved in the design of rules and procedures.
- Techniques to acknowledge and enforce acceptable behavior are employed.
- Clear limits for unacceptable behavior are established, and negative consequences for such are communicated.
- Classroom processes are democratic.

OBSERVE, ANALYZE, REFLECT

Activity 5.1 Managing Time, Space, and Learning Resources

Name of the FS Student: **JEWE B. OCTA**

Course: **BSED MAJOR IM SCIENCES** Year and Section: **BSED SCI – 4A**

Resource Teacher: **ROMMEL B. MANINANG JR.** Signature: _____ Date: **AUG. 26, 2026**

OBSERVE

Observe and use the observation sheet provided for you to document your observations.

1) As you observe, the class look into the characteristics of the learners. Note their ages.
2) How many boys are there and how many girls?
3) Focus on their behavior. Are they already able to manage their own behavior?
4) Can the learners already work independently?
5) Describe there is span of attention.

Episode 5-Creating an Appropriate Learning Environment

ANALYZE

Analyze and answer these questions on observe pleasure management practices. It is also good to ask the teacher for additional information, so you can validate your observation. Write your notes below and then organize your data in the Table that follows.

1) Are there areas in the classroom for specific purposes (Storage for teaching aids books, students, belongings, supplies, etc.)? Describe these areas. Will it make a difference if these areas for specific purposes are not present?

2) Are there rules and procedures posted in the room? List them down. Do these rules reinforce positive behavior?

3) Did this students participate in making the classroom rules? If there is Resource Teacher is available, ask him or her to describe the process. What's the effect of students participation in rule-making on students behavior.

4) What are the daily routines done by the Resource Teacher? (Prayer attendance assignment of monitors, warm up activities and cetera.)How are they done?

5) Is there a seating arrangement? What is the basis of this arrangement? Does this help in managing the class?

6) Observe the noise level in the classroom. How is this manage?

7) If a learner is not following instruction or is off task, what does the resource teacher do? Describe the behavior? Is strategies used?

8) What does the resource teacher do to reinforce positive behaviors? Behavior strategies.

Episode 5-Creating an Appropriate Learning Environment

REFLECT

Reflection as a future teacher.

1) Why do you need to enforce positive discipline?

- Based on my experience, I used to feel nervous about participating in class when a teacher was too strict or when the classroom atmosphere did not feel welcoming and feel like I don't belong in that classroom. I was often afraid of making mistakes because I am worried that my classmates might laugh at me whenever I make mistakes or that the teacher might correct me in a way that would embarrass me in front of the class. Because of this, I sometimes chose to stay quiet instead of sharing my thoughts and ideas to the class. Therefore, as a future educator, I believe this is why positive discipline is important. Harsh discipline can make students feel afraid, stressed, and less confident, while positive discipline creates a classroom where students feel safe to participate, make mistakes, and learn from them. For example, when a student gives a wrong answer, instead of embarrassing them, the teacher can say, "That's a good try. Thank you for sharing. Let's think about it together and see if we can find another answer." Simple responses like this can make students feel respected and encouraged to try again.

  For me, positive reinforcement is more than just correcting behavior. It is about guiding students with patience and respect while helping them develop confidence, responsibility, and self-control. When students feel understood and valued, they are more likely to trust their teacher, participate actively, and feel comfortable learning in the classroom.

Activity 5.2

Identifying the Different Aspects of Classroom Management

Name of the FS Student: **JEWEL B. OCTA**

Course: **BSED MAJOR IM SCIENCES** Year and Section: **BSED SCI – 4A**

Resource Teacher : **ROMMEL B. MANINANG JR.** Signature: Date: **AUG. 26, 2026**

OBSERVE

CLASSROOM MANAGEMENT MATRIX

Observe a class and accomplish the given matrix.

Aspects of Classroom Management	Description	Effect on the Learners (to be filled out after youanswer the analysis questions)
1) Specific Areas in the Classroom		
2) Classroom Rules	**There is only one classroom rule being implemented that is always participate in classroom discussions and activities, show respect to teachers and classmates and express themselves.**	

3) Classroom Procedures		
4) Daily Routines		
5) Seating Arrangement	**The classroom adviser arranged the seat plan. The seat plan is alternating, girls and then boys and so on…**	**The learners ar**
6) Handling misbehaviour/off task behavior	**There is a punishment**	**In terms of handling bad behaviors, I believe that Sir Rommel's strategy works best because the students are afraid that they will be reprimanded or they will receive demerits**
7) Reinforcement of Positive Behavior	**The teacher reinforces positive reinforcement. A good behavior is rewarded by a plus on the grades.**	**I believe as a future teacher, positive reinforcement is the best eay to reward a good behavior because the students will feel motivated to do better.**
8) Others		
9) Other		
10) Others

OBSERVATIONS OF LEARNING-TEACHING IN ACTUAL SCHOOL ENVIRONMENT

Episode 5-Creating an Appropriate Learning Environment

ANALYZE

1) How did the classroom organization and routines affect the learners' behavior?
   - The classroom organization and routines created a positive outcome to the classroom environment. What makes it better is that the teacher reinforces rewards for good behavior which motivates the students to do better and become the best. The learners developed discipline, respect, and responsibility. For example, giving a "plus" on the grades. The teacher gives a small additional point serves as a positive reinforcement because it encourages the students repeat their behavior. The presence of classroom rules such a mutual respect creates a safe, positive, and comfortable environment where both teachers and students feel valued. When students respect their teachers, the teacher also listens and respect their students, everyone becomes more willing to participate and express their ideas.
2) What should the teacher have in mind when she/he designs the classroom organization and routines? What theories and principles should you have in mind?
   - When designing classroom organization and routines, the teacher should consider the students' needs, safety, comfort, participation, and behavior. The classroom should be organized in a way that it encourages cooperation, respect, and active learning. I would apply Skinner's Operant Conditioning Theory, particularly the positive reinforcement, ehere good behavior is recognized through praise, plus points or simple rewards. This encourages the students to repeat their positive behaviors, follow classroom routines, participate actively, and develop a more responsible and positive attitude towards learning.
3) Which behavior strategies were effective in managing the behavior of the learners? In motivating students? Why were they effective?
   - The most effective behavior startegy ai have observed was the use of rewards and appropriate punishments. Rewards were particularly effective in motivating the students because they feel recognized and appreciated when they show good behavior, participated actively, or completed their tasks. Simple rewards such as, praise, plus point, or small privileges, encouraged them to continue doing positive behaviors. At the same time, appropriate consequences helped students understand that their actions have results. Overall, these strategies were effective because they gave students clear reasons to behave well while making them feel their efforts were appreciated and valued.

REFLECT

Reflect on the following and write your insights.

1) Imagine yourself organizing your classroom in the future. In what grade year level do you see yourself? What routines and procedures would you consider for this level, why?
   - I can see myself teaching grade 7 students because I believe that I am the kind of teacher that is welcoming, warm and friendly. Grade 7 students are new to the high school environment and I believe that I will be able to give them the warm welcome they need and give them the safe and supportive environment. I, as a teacher, stronly believe in positive reinforcement because I, myself, gets motivated when a teacher recognizes my positive behavior. It pushes me to become better and encourage me to become more. I want to pass that feeling to my future students. I want to inspire them to be better through recognizing their efforts. I believe that Grade 7 students needs positive reinforcement because they are still a child and seeks validation from people they look up to. Hence, I believe that my routines and procedure will be effective for Grade 7 students.
2) Make a list of the rules you are likely to implement in this level. Why would you choose these rules?
   - For Grade 7 students, I would implement simple and clear rules that are easy to understand and follow. These rules include respecting teachers amd classmates, listening when someone is speaking participating in activities, completing tasks in time, keeing the classroom clean, asking permission when needed, and using gadgets only when allowed. I would also encourage the students to follow these rulesby using positive reinforcement, such as praise or small rewards, whenver they show good behavior. This can help create a classroom that is organized, respectful, and enjoyable for everyone.
3) Should learners be involved in making the class rules? Why?
   - Yes, students shiuld be involved in making thr class rules because it gives them a sense of responsibility and ownership in the classroom. When students are given the chance to share their ideas and help decide the rules, they are more likely to understand, accepts, and follow them. It will also teach them to listen to others, respect different opinions, and work together. For me, involving students in creating the rules makes the classroom feel fairer and gives them a voice in creating a positive learning environment.
