Close Encounter with School Curriculum

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

SPARK Your Interest

Formal education begins in school. Schools are institutions established to design total learning activities appropriate for each learner in each grade level. Thus, schools have recommended curriculum which is the enhanced K to 12 curriculum. The recommended curriculum was translated into written curriculum like books, modules, teachers' guides, and lesson plans which are the basis of the taught curriculum. A teacher who implements the curricula needs support materials (support curriculum) to enhance teaching and learning so that the written and the taught curricula can be assessed (assessed curriculum) to determine if learning took place learned curriculum). However, there are so many activities that happen in schools but are not deliberately planned. This refers to the hidden curriculum.

A classroom teacher plans, implements, and evaluates school learning activities by preparing a miniscule curriculum called a lesson plan or a learning plan. The teacher then puts life to a lesson plan by using it as a guide in the teaching-learning process where different strategies can be used to achieve the learning objectives or outcomes. There are many styles of writing a lesson plan, but the necessary parts or elements such as (a) Learning Outcomes (b) Subject Matter (c) Teaching -Learning Strategies, and (d) Evaluation or Assessment should always be included.

All of these elements should be aligned so that at the end of the teaching-learning episode, learning will be achieved with the classroom teacher as a guide.

FS 1
FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

TARGET Your Intended Learning Outcome

At the end of this Episode, I must be able to:

- identify the different curricula that prevail in the school setting;
- describe how the teacher manages the school curriculum by planning, implementing lessons through different strategies and assessment of learning outcomes; and
- analyze if the teacher aligns the objectives to subject matter, to teaching strategies and assessment.

REVISIT the Learning Essentials

School Curriculum: What is this about?

From a broad perspective, curriculum is defined as the total learning process and outcomes as in lifelong learning. However, school curriculum in this course limits such definition of total learning outcomes to confine to a specific learning space called school. Schools are formal institutions of learning where the two major stakeholders are the learners and the teachers.

Basic education in the Philippines is under the Department of Education or DepEd and the recommended curriculum is the K-12 or Enhanced Basic Education Curricula of 2013. All basic education schools offering kindergarten (K) elementary (Grades 1 to 6) and Secondary (Grades 7-10, Junior High School and Grades 11 to 12, Senior High School) adhere to this national curriculum as a guide in the implementation of the formal education for K to 12. What are the salient features of the K tol2 Curriculum? Here are the features. It is a curriculum that:

1. strengthens the early childhood education with the use of the mother tongue.
2. makes the curriculum relevant to the learners. The use of contextualized lessons and addition of issues like disaster preparedness, climate change and information and communication technology (ICT) are included in the curriculum. Thus, in-depth knowledge, skills and values, attitude through continuity and consistency across every level and subject.
3. builds skills in literacy. With the use of Mother Tongue as the main language in studying and learning tools from K to Grade 3, learners will become ready for higher level skills.

4. ensures unified and seamless learning. The curriculum is designed in a spiral progression where the students learn first the basic concepts, while they study the complex ones in the next grade level. The progression of topics matches with the developmental and cognitive skills. This process strengthens mastery and retention.
5. gears up for the future. It is expected that those who finish basic education in Grade 12 will be ready for college or tech voc careers. Their choice of careers will be defined when they go to Grades 11 and 12.
6. nurtures a fully developed youth. Beyond the K to 12 graduate, the learner will be ready to embark on different career paths for a lifetime. You will recall that a school curriculum is of many types for the Kindergarten to Grade 12 in the country.

- The enhanced curriculum K tol2 curriculum is the Recommended Curriculum. It is to be used nationwide as mandated by Republic Act 10533.
- When the curriculum writers began to write the content and competency standards of the K to 12 Curriculum it became a Written Curriculum. It reflects the substance of RA 10533 or the Enhanced Basic Education Act of 2013. In the teacher's class, it is the lesson plan. A lesson plan is a minuscule written curriculum in minuscule.
- What has been written in a lesson plan has to be implemented. It is putting life into the written curriculum, which is referred to as the Taught Curriculum. The guidance of the teacher is very crucial.
- A curriculum that has been planned, and taught needs materials, objects, gadgets, a laboratory, and many more that will help the teacher implement the curriculum. This is referred to as the **Supported Curriculum**.
- To find out if the teacher has succeeded in implementing the lesson plan, an assessment shall be made. It can be done in the middle or end of the lesson. The
  curriculum is now called the **Assessed Curriculum**.
- The result of the assessment when successful is termed a **Learned Curriculum**. Learned Curriculum whether small or big indicates accomplishment of learning outcomes.

- However, there are unplanned curricula in schools. These are not written, nor deliberately taught but they influence learning. These include peer influence, the media, the school environment, the culture and tradition, natural calamities, and many more. This curriculum is called **Hidden Curriculum or Implicit Curriculum**.

So what will be the roles and responsibilities of the teacher about the school curriculum, specifically in the K to 12 or the enhanced curriculum for basic education?

Teachers then should be multi-talented professionals who:

- Know and understand the curriculum as enumerated above;
- Write the curriculum to be taught;
- Plan the curriculum to be implemented;
- Initiate the curriculum which is being introduced;
- Innovate the curriculum to make it current and updated;
- implement the curriculum that has been written and planned; and
- Evaluate the written, planned, and learned curriculum.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

OBSERVE, ANALYZE, REFELCT

Activity 8.1 Curricula in the School Setting

It's time to look around. Discover what curriculum is operating in the school setting. Recall the types of curriculum mentioned earlier. Can you spot where these are found? Let's do a hunting game!

OBSERVE

Resource Teacher : **ROMMEL B. MANINANG JR.** Signature: _____ School: **ABAÑO LABORATORY SCHOOL**

Grade/Year Level : **GRADE 9** Subject Area : **SCIENCE** Date: **August 28, 2026**

copy, make observations of the process and record your information in the matrix below. Describe your observations.

Type of Curriculum	Where Found	Description
1. Recommend Curriculum (K to 12 Guidelines)	DepEd K to 12 Curriculum Guide	Provides standards, competencies, and learning goals to be taught.
2. Written Curriculum (Teacher's Lesson Plan)	Teacher's desk/Classroom	Contains the planned lessons, objectives, activities, and assessments.

3. Taught Curriculum (Teaching Learning Process)	Classroom	Refers to the actual teaching and learning process between the teacher amd students.
4. Supported Curriculum (Subject Textbook)	Classroom/School Library	Includes textbooks, modules, learning materials, and other resources that supports learning.
5. Assessed Curriculum (Assessment Process)	Classroom/Teacher's Records	Includes quizzes, exams, activities, and other assessments used to measure learning.
6. Learning Curriculum (Achieved Learning Outcomes)	Students/Classrooms	Refers to knowledge, skills, attitudes, and learning outcomes actually gained by the students
7. Hidden Curriculum (Media)		Refers to values, attitudes

ANALYZE

Which of the seven types of curriculum in the school setting is easy to find? Why?

- The taught curriculum is the easiest to find among the seven types of curriculum in the school setting because it is directly visible in the actual teaching and learning process. During my classroom observations, we can easily see how the teacher present the lesson, explain concepts, asks questions, facilitate activities, and interacts with the students. It is essentially the implementation of the written curriculum, where the planned lesson amd competencies become an actual classroom experience. Since we were able to observe what happens in the classroom, the taught curriculum was the most evident and easiest to identify. It is also easier to recognize because it can be seen through the teacher's strategies and the students' participation and responses during the lesson.

Which is difficult to observe? Why?

Are these all found in the school setting? How do curricula relate to one another?

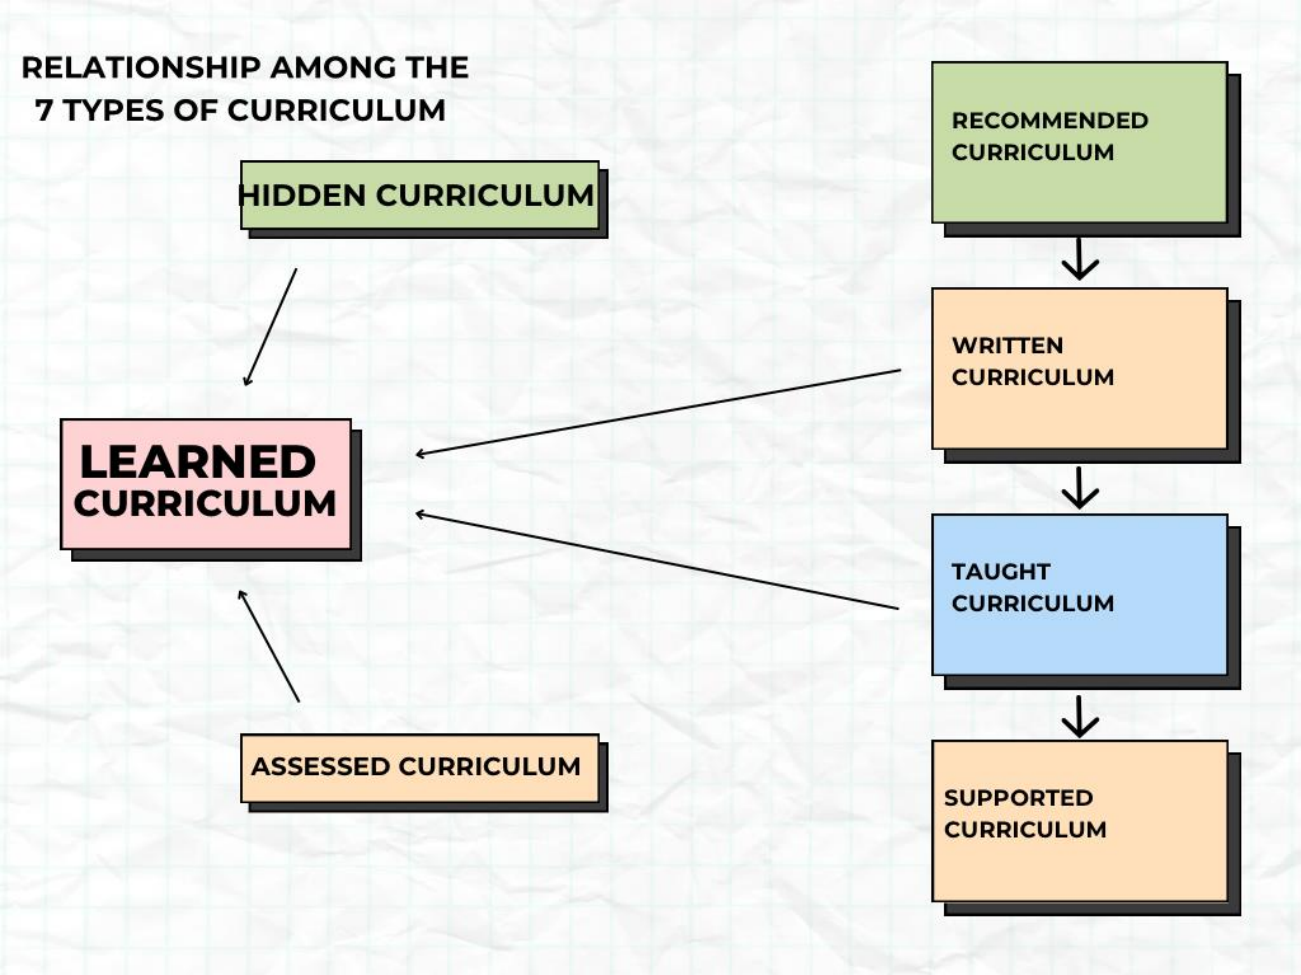

- The seven types of curriculum are closely connected and form a continuous process. The recommended curriculum provides the overall direction. This is translated into the written curriculum, such as lesson plans and and learning competencies. The teacher then implements it through the taight curriculum. The supported curriculum provides the materials and resources needed to make teaching and learning possible. The assessed curriculum determines whether the intended learning has been achieved. The results of this this process are reflected into the learning curriculum, or what the students actually learn. Alongside all of these the hidden curriculum influences students' values, attitudes, and behaviors through their everyday experiences in the school.
  On simple terms, the recommended curriculum tells what should be learned, the written curriculum plans it, the taught curriculum delivers it, the supported curriculum provides resources for it, the assessed curriculum measures it, the learning curriculum shows what the students actually gained, and the hidden curriculum develops lessons and values beyond what is explicitly taught.

  Draw a diagram to show the relationship of the curriculum to the other.

Episode 8 Close Encounter with the School Curriculum

FS 1
FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

REFLECT

Make a reflection on the diagram that you have drawn.

- The diagram helped me understand the seven types of curriculum are interconnected and work together in order to achieve effective learning. The recommended curriculum provides the direction, while the written curriculum organizes what should be taught. The taught amd supported curriculum bring plans to actual classroom practice, while the assessed curriculum checks whether the intended learning outcome has been achieved. Theses processes contribute to the learner curriculum, or what students actually gained. At the same time, the hidden curriculum influences students' values, attitudes, and behavior through their everyday experiences in school.
  As a future teacher, I learned that curriculum is not only about what is written in a guide or lesson plan. Every part of the curriculum plays an impious role in shaping the students' learning and overall development.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

Activity 8.2

The Minuscule School Curriculum: The Lesson, A Closer Look

Resource Teacher : **ROMMEL B. MANINANG JR.** Signature:  School: **ABAÑO LABORATORY SCHOOL**

Grade/Year Level : **GRADE 9** Subject Area : **SCIENCE** Date: **AUG. 28, 2026**

OBSERVE

This activity requires a full lesson observation from Motivation to Assessment.

Procedure:

1. Secure permit to observe one complete lesson in a particular subject, in a particular grade/year level.
2. Keep a close watch on the different components of the miniscule curriculum: the lesson
3. Follow the three major components of a curriculum (Planning, Implementing, and Evaluating/ Assessing). Observe and record your observation.

Observe and Record Observations on the Following Aspects

Major Curriculum Components	Key Guide for Observation (Carefully look for the indicators/behavior of the teacher along the key points. Write your observation and description in your notebook.)
A. Planning	Borrow the teacher's lesson plan for the day. What major parts do you see? Request a copy for your use. Answer the following questions:

	a. What are the lesson objectives/learning outcomes? 1. Describe and differentiate the three types of plate boundaries—convergent, divergent, and transfomm—based on their movement and chalacteristics 2. Appreciate the importance of understanding plate boundaries in explaining changes and natural events occurring on Earth's surface. 3. Ilustrate the movement of tectonic plates at convergent, divergent, and transform boundaries using simple diagram or model. b. What are included in the subject matter? - c. What procedure or method will the teacher use to Implement the plan? - d. Will the teacher assess or evaluate the lesson? How will this be done? - The teacher will assess what the students have learned through creating a diagram or model of the movement of the plate tectonic.
B. Implementing	Now it's time to observe how the teacher implemented the prepared lesson plan. Observe closely the procedure. a. How did the teacher begin the lesson? - The teacher started off the lesson with a question to give the students a clue about what they are going to learn throughout the lesson. b. What procedure or steps were followed? - The teacher followed the flow of his lesson plan. He started off with a simple question, followed by a motivational activity, layed out the learning objectives , unlocked new vocabulary words that they will encounter during the lesson and then the lesson proper and lastly group activity to assess what they have learned. c. How did the teacher engage the learners? - The teacher would asks questions from time to time in order to engage the students and keep their focus on the lesson. d. Was the teacher a guide at the side?

	- Yes. e. Were the learners on task?/Or were they participating in the class activity? - The learners were both on task and was participating in the class activity. Sir Rommel gave a group activity before amd after the lesson proper and thenhe would always try to engage the students during lesson proper by aslijg questions. f. Was the lesson finished within the class period? - Yes. There are 2 days alloted to finish the lesson. The lesson was finished on time.
C. Evaluating / Assessing	Did learning occur in the lesson taught? Here you make observations to find evidence of learning. a. Were the objectives as learned outcomes achieved? - Yes, because the students were able to differentiate the different movement of plate tectonics and was able to create a model of the movement of the plate tectonics. b. How did the teacher assess/evaluate it? - The teacher assessed the students through giving a task to create a model of the movement of plate tectonics. c. What evidence was shown? Get pieces of evidence.

ANALYZE

Write a paragraph based on the data you gathered using these key questions.

1) How does the teacher whom you observed compare to the ideal characteristics or competencies of global quality teachers?
   - The teacher demonstrated characteristics of a global quality teacher by being well-prepared, organized, and focused on achieving the kearning objectives. The teacher used appropriate strategies, asked questions to engage the students, guided them throughout the activities, and encouraged active participation. The lesson also connected the topic to meaningful learning through group activities showing effective and learner-centered teaching.

2) Was the lesson implemented as planned? Describe.
   - Yes, the lesson was Impl as planned. The teavher followed the prepared lesson plan and its sequence, beginning with a simole question, followed by motivational and interactive group activities. The teacher also asked question throughout the lesson to monitor and maintain the class period. The lesson was completed within the class period, and the planned learning activities and assessments were properly carried out.

3) Describe the methods used by the teacher in handling the students' differences in abilities. How did the students respond to the teacher? Did the teacher use differentiated instruction? If yes, describe how.
   - The teacher handled the students' differences in abilities by using questions, group activities, and guided learning. The teacher asked questions throughout the lesson to check students' understanding and keep them engaged. The students responded positively by participating actively and staying on task during the activities. The teacher also used group activity that allowed students to work and learn together, which can be considered a form of differentaited instruction because students were given opportunities to participate according to their abilities and collaborate with their classmates.

4) Can you describe the disposition of the teacher after the lesson was taught? Happy and eager? Satisfied? Disappointed and exhausted?
   - After the lesson, the teacher appeared satisfied and positive. The lesson was completed as planned, the students actively participated in activities, and the teacher was able to maintain their attention through questioning and group work. These observations suggest that the teacher was happy with the students' participation and performance and overall outcome of the lesson.
5) Can you describe the majority of students' reactions after the lesson was taught? Confused? Happy and eager? Contented? No reactions at all.
   - The majority of the students were happy amd eager after the lesson because they were able to learn new concepts about tectonics plates boundaries. They became more interested as they understood how the movement of plates affects the formation of different landforms and geological features. For example, they learned that divergent boundaries can form rift valleys and mid-ocean ridges, while convergent boundaries form mountains and deep-ocean ridges. They also learned that transform boundaries, such as San Andreas Fault in California, occur when plates slide past each other and can cause earthquakes. Overall. The students appeared interested and satisfied because the lesson helped them connect the concepts to real-world geological events.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

REFLECT

Based on your observations and tasks in Activity 2 how will you prepare your lesson plan? Make a short paragraph on the topic.

- Based on my observations from Activity 2, I will prepare my lesson plan to be student-centered, considering that learners have different abilities, interests, and eats of learning. I will use varied activities such as questioning, group work, and interactive tasks to give every student an opportunity to participate and understand the lesson at their own pace. I will also connect the lesson to real-world experiences so that the students can see the relevance of Science in their daily lives. Through this approach, I want my students to realize that Science is not only about memorizing concepts but also about understanding, exploring, and applying what they have learned to real-life situations.

Activity 8.3

Constructive Alignment of the Components of a Lesson Plan

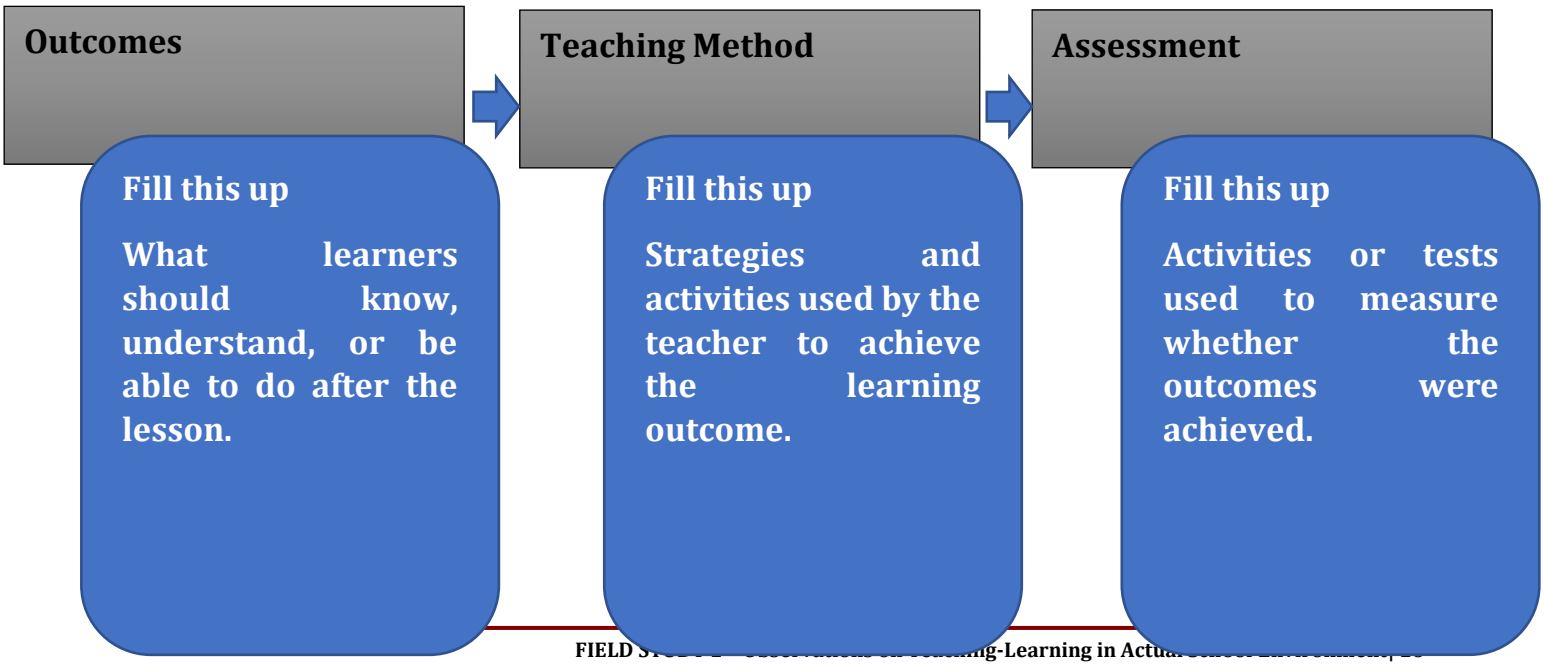

Resource Teacher : **ROMMEL B. MANINANG JR.** Signature:  School: **ABAÑO LABORATORY SCHOOL**

Grade/Year Level : **GRADE 9** Subject Area : **SCIENCE** Date: **09/04/26**

OBSERVE

Using the diagram below fill up the component parts of a lesson plan

I. Title of the lesson: _____
II. Subject area: _____
III. Grade Level: _____

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 8 Close Encounter with the School Curriculum

ANALYZE

Answer the following questions based on the diagram.

1. Are the three components constructively aligned? Explain.

- Yes. The outcomes, teaching methods, and assessments are constructively aligned because the teaching methods are designed to achieve the intended outcomes, while the assessment measures whether the outcomes were achieved.

2. Will the outcomes be achieved with the teaching methods used? Why?

- Yes, because the teaching methods are appropriate aligned in the learning outcome. When the teacher uses suitable strategies and activities, students are given opportunities to understand and apply what they have learned.

3. What component would tell if the outcomes have been achieved?

- The assessment component would tell whether the intended learning outcomes have beem achieved.

REFLECT

What lessons have you learned in developing or writing a lesson plan?

- I have learned that a lesson plan should be organized and purposeful. The objectives, Teaching strategies, activities, and assessments should always work together to make learning effective.

What value will it give to the teacher if the three components are aligned?

- Alignment helps the teacher ensure that the lesson stays focused on the intended outcomes and that students are properly guided and assessed throughout the learning process.

SHOW Your Learning Artifacts

Learning Artifacts for Activity 1-3

Present an artifact for Activities 1, 2, and 3.

Activity 1: Artifact

1. Present evidence for each kind of curriculum opening in the school setting. This can be in pictures, realia, documents, or others.

Activity 2: Artifact

1. Present a sample curriculum in the form of a Lesson Plan.

Activity 3: Artifact

1. Present a matrix to show the constructive alignment of the three components of a lesson plan.
   a. Example:

Lesson Title: _____
Subject Area: _____
Grade Level: _____

Lesson Outcomes	Teaching Methods	Evaluation
1. Identify the three types of tectonic plate boundaries: Divergent, Convergent, and Tranform.	The teacher uses questioning, discussion, and visual aids to introduce and explain the three types of plate boundaries.	Oral questioning and short identification questions about the three types of plate boundaries.
