OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 10 The Instructional Cycle

SPARK Your Interest

This Episode centers on the guiding principles in the selection and use of teaching methods. It will also tackle lesson development in the OBTL way. The K to 12 curriculum and teacher education curriculum are focused on outcomes, standards, and competencies. This means that lessons must be delivered with a focus on outcomes. Likewise, this Episode dwells on the types of questions, questioning and reacting techniques that teachers make use of. The type of questions that teachers ask and their manner of questioning and reacting to student responses have a bearing on class interaction. This Episode strengthens the theories learned in the course, Teaching Methods and Strategies and in other professional subjects in Education.

TARGET Your Intended Learning Outcome

At the end of this Episode, I must be able to:

- identify the application of some guiding principles in the selection and use of teaching strategies.
- determine whether or not the lesson development was in accordance with outcome-based teaching and learning.
- identify the Resource Teacher's questioning and reacting techniques.
- outline a lesson in accordance with outcome-based teaching-learning.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 10 The Instructional Cycle

REVISIT the Learning Essentials

These are the guiding principles in the selection and use of teaching methods:

1. Learning is an active process.
2. The more senses that are involved, the more and the better the learning.
3. A non-threatening atmosphere enhances learning.
4. Emotion has the power to increase retention and learning.
5. Good teaching goes beyond the recall of information.
6. Learning is meaningful when it is connected to students' everyday life.
7. An integrated teaching approach is far more effective than teaching isolated bits of information.

Realizing the importance of these guiding principles in teaching and learning, the Department of Education promotes Standards-and Competency-Based teaching with its K to 12 Curriculum Guide. The Technical Education Skills Development Authority (TESDA) has been ahead of DepEd and the Commission on Higher Education (CHED) in the practice of Competency Standards-Based teaching and Assessment. CHED requires all higher education institutions in the country to go outcome-based education (OBE) in its CHED Memo 46, s. 2012. Outcome-based teaching and learning (OBTL) is OBE applied in the teaching-learning process. It is equivalent to competency-based and standards-based teaching and learning in the Ktol2 Curriculum.

When you apply OBTL you see to it that the teaching-learning activities (TLAs) and in turn the Assessment Tasks (ATs) are aligned with the intended learning outcomes. In other words, in OBTL you first establish your intended learning outcomes (lesson objectives). Then you determine which teaching-learning activities (TLAs) and the assessment tasks (ATs) you will have to use to find out if you attained your ILOs.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 10 The Instructional Cycle

In lesson planning, the ILOs are our lesson objectives, the TLA's are the activities we use to teach and the AT's are the evaluation part.

OBE and OBTL are not entirely new. They are importantly new. With mastery learning of Benjamin Bloom (1971), we were already doing OBE and OBTL.

Likewise, it is also important that teachers must be able to have a mastery of the art of questioning and reacting techniques to ensure the effective delivery of instruction.

These are the types of questions that teachers ask.

Types of Questions that Teachers Ask

1. Factual/Convergent/Low-level	Who, What, Where, When questions With one acceptable answer
2. Divergent/ Open-ended/ High-level/Higher-order/Conceptual	Open-ended; has more then one acceptable answer
a. Evaluation	
b. Inference	e.g. When the phone rang and Liz picked it up, she was all smiles. What can you infer about Liz?
c. Comparison	
d. Application	
e. Problem-solving	
3. Affective	e.g. How do you feel?

These are also some of the reacting techniques that teachers use:

1. Providing acceptance feedback
2. Providing corrective feedback
3. Giving appropriate and sincere praise
4. Repeating the answer
5. Explaining the answer / expanding the answer
6. Rephrasing the question
7. Asking follow up questions
8. Redirecting questions to other pupils
9. Soliciting student questions
10. Encouraging through non-verbal behavior
11. Criticizing respondent for his/her answer
12. Scolding for misbehavior or for not listening
13. Overusing expressions such as “okay”, “right”

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 10 The Instructional Cycle

OBSERVE, ANALYZE, REFELCT

Activity 10.1 **Applying the Guiding Principles in the Selection and Use of Strategies**

Resource Teacher : **ROMMEL B. MANINANG JR.** Signature: _____ School: **ABAÑO LABORATORY SCHOOL**

Grade/Year Level : **GRADE 9** Subject Area : **SCIENCE** Date: **Sept. 10, 2026**

Observe one class with the use of the observation sheet for greater focus then analyze my observations with the help of the guide questions.

1. The more senses that are involved, the more and the better the learning.	e.g. Teacher used video on how digestion takes place and a model of the human digestive system.
2. Leaning is an active process.	The teacher asks questions so that the students have better retention and understanding of the concepts.
3. A non-threatening atmosphere enhances learning.	The teacher does not invalidate the students' answers and he acknowledges them everytime they participate in class activities.
4. Emotion has the power to increase retention and learning.	The teacher regulates and handles the students emotion
5. Good teaching goes beyond recall of information.	The teacher demonstrated how the plate boundaries moves so that the students will be able to understand the concept better.
6. Learning is meaningful when it is connected to students' everyday life.	The teacher provided real-life examples of results of movement of plate tectonics which makes learning meaningful because they were able to understand that it happens it real-life
7. An integrated teaching approach is far more effective than teaching isolated bits of information.	The teacher connected the lesson to real-life situations and used demonstration and example to explain the concepts. By combining these—the students were able

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 10 The Instructional Cycle

ANALYZE

What is the best method of teaching? Is there such a thing?

- For me, there is no specific single best method of teaching because students have different needs and learning styles. But the most effective approach is to use a combination of strategies, such as questioning, demonstrations, visual materials, and real-life examples, especially on teaching Science.

REFLECT

Reflect on this question.

How do we select the appropriate strategy for our lessons?

- We should select the appropriate strategy based on the learning objectives, lesson content, students' needs, and available resources. The strategy should help students actively participate and understand the lesson rather than simply memorize information.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 10 The Instructional Cycle

Activity 10.2 Determining Outcome-Based Teaching and Learning

Resource Teacher : **ROMMEL B. MANINANG JR.** Signature: . School: **ABAÑO LABORATORY SCHOOL**

Grade/Year Level : **GRADE 9** Subject Area : **SCIENCE** Date: **SEPT. 10, 2026**

OBSERVE

Observe a class and answer the following questions.

1. Did the Teacher state the learning objectives/intended learning outcomes (ILOs) at the beginning of the class? Did he/she share them with the class? How?

- The teacher stated the objectives at the beginning of the class so that the students are aware of what they are expected to learn by the end of the lesson. The objectives were included in the teacher's presentation and were discussed briefly before proceeding with the lesson. Thus helped students understand the purpose of the lesson and have them a clear direction on ehat they needed to accomplish. By presenting and explaining the objectives, the teacher also allowed the students to connect the activities and discussions to the expected learning outcomes.

2. What teaching – learning activities (TLAs) did he/she use? Did these TLAs help him/her attain his/her lesson objectives/ ILOs? Explain your answer.

- The teacher commonly used questioning and classroom discussion in his teaching-learning activities. The teacher asked questions throughout the lesson to check the students' understanding, encourage them to think about the topic, and allow them to participate in the discussion. These activities helped attain the objectives because the

question were directly related to the concepts being taught and gave the teacher opportunity to determine whether the students were following and understanding the lesson. The students were also encouraged to expresstheir ideas and answers, making the lesson more interactive rather than relying only on teacher explanations.

3. What assessment task/s did teacher employ? Is/Are these aligned to the lesson objectives/ILOs?

- The teacher employed oral questioning and creating models as assessments tasks. Oral questioning allowed the teacher to immediately check students' understanding of the kesdon by asking them questions related to the concepts discussed. Meanwhile, creating models allowed the students to demonstrate their understanding in a more concrete and visual way by applying the concepts they learned. These assessment tasks were aligned with the lesson objectives because they assessed both the students' knowledge and their ability to apply what they had learned. Through their answers and models, the teacher could determine whether the students had achieved the expected learning outcomes and identify areas that might still need clarification or improvement.

ANALYZE

1. What are your thought about Outcome-Based Teaching and Learning (OBTL)?

- For me, Outcome-Bsed Teaching and Learning (OBTL) is an effective approach because it gives both students and teachers a clear direction of what should be achieved at the end of the lesson. Based on my observation, I realized that stating the learning objectives at the beginning helps students understand what thry are expected to learn and accomplish. I also learned that the activities and assessments should be connected to these objectives so that the teacher can properly determine if learning has taken place. As a future teacher, I believe OBTL will help me become more intentional in planning my lessons because I will not only focus on discussing the topics but also on making dure that my students actually achieve the expected learning outcomes.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 10 The Instructional Cycle

REFLECT

Reflect on the use of OBTL?

- Reflecting on the use of Outcome-Based Teaching and Learning, I realized that it is important to make sure that the objectives, teaching activities, and assessments are connected to one another. From my observation, the teacher clearly presented the objectives, used oral questioning to engage the students, and allowed them to create models to demonstrate their understanding. This showed me that teaching should not only focus on finishing the lesson but also making sure that the students achieve the intended learning outcomes. I would apply OBTL by carefully planning my objectives, activities, and assessments so that every part of my lesson has a clear purpose and helps my students reach the expected outcomes.

Episode 10 The Instructional Cycle

Activity 10.3 Applying Effective Questioning Techniques

Resource Teacher : **ROMMEL B. MANINANG JR.** Signature: . School: **ABAÑO LABORATORY SCHOOL**

Grade/Year Level : **GRADE 9** Subject Area : **SCIENCE** Date: **SEPT. 10, 2026**

OBSERVE

Observe a class activity. You shall focus on the questions that the Resource Teacher asks during the classroom discussion. Write the questions raised and identify the level of questioning.

Types of Question	Examples of Questions that the Resource Teacher Asked
1. Factual/ Convergent Closed/ Low level	**What type of plate boundary occurs when two tectonic plates move towards each other?**
2. Divergent/ Higher – level/ Open – ended/ Conceptual	
a. Evaluation	**Do you think convergent plate boundaries are more likely to cause major natural hazards than divergent boundaries? Why?**
b. Inference	**If two tectonic plates are moving away form each other and magma rises between them, what can you infer about the formation of the Earth's crust in the area?**

c. Comparison	**How are convergent and divergent boundaries different in terms of plate movement and the landforms they create?**
d. Application	**If you were living in an area near a convergent plate boundary, what safety measures would you oractice to prepare for possible earthquakes or volcanic eruptions?**
e. Problem-solving	**Suppose a community is located near an active plate boundary and frequently experiences earthquakes. What plan would you propose to help the community reduce the effects of these earthquakes?**
3. Affective	**Why do you think it is important for us to understand plate boundaries and their effects on people's lives and communities?**

ANALYZE

1. Neil postman once said: "Children go to school as question marks and leave school as periods!" Does this have something to do with the type of questions that teachers ask and the questioning and reacting techniques that they employ?

- Yes, Neil Postman's statement is related to the types of questions teachers ask and the questioning techniques they use. When children enter school as "question marks," they are naturally curious and eager to ask questions. However, if teachers mostly ask factual, closed-ended, or low-level questions that only require one correct answer, students may gradually become less curious and simply wait for the teacher to provide the answer.
-
- Based on the plate-boundary questions, teachers can instead use open-ended, higher-order questions that encourage students to evaluate, infer, compare, apply concepts, and solve problems. For example, asking students what they would do if they lived near an active plate boundary allows them to apply their knowledge to a real-life situation. Affective questions can also encourage students to recognize the importance of understanding plate boundaries and their effects on communities. Through effective questioning and appropriate reacting techniques—such as giving students time to think, acknowledging different answers, and asking follow-up questions—teachers can help students remain curious and develop critical-thinking skills. Thus, teachers have an

important role in ensuring that students do not leave school as "periods," but continue to be "question marks" who are willing to explore, think, and ask meaningful questions.

REFLECT

Reflect on "The importance of using various reacting techniques"

- I realized that using various reacting techniques is important because students respond differently to questions and classroom situations. As a future teacher, I should not simply accept an answer as correct or incorrect, but should encourage students to explain their thinking, ask follow-up questions, and learn from their mistakes. Techniques such as giving positive feedback, probing for deeper answers, acknowledging students' ideas, and giving them enough time to think can make students feel more comfortable participating. I believe that effective reacting techniques can build students' confidence, encourage active participation, and create a classroom where they are not afraid to share their ideas. Through this, I can help my students become more curious, critical, and engaged learners.
