OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

Assessment FOR Learning and Assessment AS Learning (Formative Assessment)

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

SPARK Your Interest

Assessment is an essential part of the instructional cycle. The instruction cycle consists of l) setting the intended learning outcome/s, 2) selecting a teaching methodology, strategy, and activity that are aligned to the learning outcome and topic that are developmentally appropriate to the learners, and 3) assessment itself. Assessment is the part of the instructional cycle that determines whether or not the intended learning outcome has been attained and so necessarily, the assessment task must be aligned to the intended learning outcome.

In a lesson on assessment, we can speak of assessment *for* learning, assessment *of* learning, and assessment *as* learning.

This episode will dwell on assessment *for* learning and assessment *as* learning. Assessment *for* learning is referred to as **formative assessment** while assessment as learning is referred to as **self-assessment**.

TARGET Your Intended Learning Outcome

At the end of this Episode, I must be able to:

- Demonstrate knowledge of the design and use of formative assessment; and
- Explain the importance of formative assessment.

DISCOVER the Learning Essentials

- In Outcome-based Teaching-Learning/Competency-based Teaching/Teaching by Objective, we ensure that the. intended outcome/competency/ objective is attained at the end of the lesson and so while we are still in the process of teaching, we do check learners' understanding and progress.
- If we find out that the learners' failed to understand prerequisite. knowledge and skills, we reteach until learners' master them. This is called **FORMATIVE** assessment, assessment while the learners are being **formed** or taught. It is assessment in the midst: of instruction.
- Formative assessment is also referred to as assessment *for* learning, Assessment *for* learning simply means we do assessment to ensure learning.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

- We do not wait for the end of the lesson to. find out if learners understood the lesson or not because if it is only at the end of the lesson that we discover that the learners did not understand the lesson, we have wasted so much time and energy teaching presuming that everything was clear, only to find out at the end of the lessom that the learners did not understand the lesson at all. This means that we have to reteach from the very beginning, something that we could have saved ourselves from doing had we given time to find out if the lesson was understood while still teaching.
  Assessment for learning encourages peer assessment.

OBSERVE, ANALYZE, REFLECT

Activity 12.1

Observing Assessment FOR Learning Practice (Formative Assessment)

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject: **SCIENCE** Date: **09/10/26**

OBSERVE

1. Observe what the Teacher does or listen to what the Teacher says to find out if the students understood the lesson while teaching-learning is in progress.

What Teacher Said	Tally	Total
• LISTEN	• During the checking of attendance • When the teacher was discussing • When the students are presenting their works	4

• Do you undeservedly class?	• When there are individual or group activities guven by the teacher • During the discussion • After the her give a real-life example	3
• Any questions or clarification?	• After the discussion	3
• Can someone summarize/differentiate the plate boundaries?	• After the discussion	2
What Teacher Did	Tally	Total
• Walk back and forth the classroom during discussion	• During the discussion • During activities, monitoring the activities	7
• Calling students to answer	• During the discussion • After the discussion	4
• Giving insights	• During the discussion • After the discussion	4

2. Did the teacher ask the class “Did you understand”? If she did, what was the class’ response?

- Yes, the teacher asked the class, to ensure that the students were actively listening and understand the lesson. This question served as a way to check students understanding and encourage participation, Most of the students responded "yes,"indicating that they understood the discussion. However, some students also took the opportunity to raise their questions to clarify certain parts of the lesson they found confusing.

3. Did the students make the teacher feel or sense they did not understand the lesson or a part of the lesson? How?
- Yes, some students made the teacher feel that they did not fully understand the lesson through their behavior and expressions. They remained silent, avoided eye contact, and showed facial expressions that indicated confusion or deep thinking.Their lack of response or hesitation to participate shows that they were struggling to grasp certain parts of the discussion.

4. If they did, how did the teacher respond?
- When the teacher noticed that some students were having difficulty understanding the lesson, he immediately addressed the situation by encouraging them to ask questions without hesitation. He made sure to explain the concepts in a simpler and clearer way, often using relatable examples to make the ideas easier to grasp. In some cases, he also switched to using the Tagalog language to ensure that all students could follow the discussion and fuilly comprehend the lesson.

5. Were the students allowed to ask for clarification? How was this done?
Yes, once the teacher noticed that his students were having some difficulty, he asked them if they had any questions or clarifications, creating an environment where his students felt free to share their concerns.

6. If she found out that her lesson was not clearly understood, what did the teacher do? Did you observe any of these activities? Please check.

- **X** Peer tutoring (Tutors were assigned by the teacher to teach one or two classmates.
- **X** Each-one-teacher-one (Students paired with one another).
- **X.** Teacher gave a Module for more exercises for lesson mastery.
- **X** Teacher did re-teaching.

Others, please specify

_____
_____

7. She engaged herself in re-teaching, how did she do it? Did she use the same teaching strategy? Describe.
- The teacher did not re-teach the lesson but rather reiterated the important concepts and highlighted the important information.

8. While re-teaching by himself/herself and/or with other students-turned tutors, did the teacher check on students' progress?
No. No re-teaching happened—only reiterating the concepts.
If yes how?

1. Why should a teacher find out if students understand the lesson while teaching is in progress? It is not better to do a once-and-for-all assessment at the completion of the entire lesson?

- It's important for a teacher to check students' understanding while teaching so they can see right away which parts are confusing.This allows them to adjust explanations or give more examples before moving on. Waiting until the end might be too late to address misunderstandings and misconceptions, which can affect learning

2. Why is not enough for a teacher to ask, "Did you understand, class?" when he/she intends to check on learners' progress?
- Asking "Did you understand, class?" isn't enough because it only gives a yes or no answer. Some students may say yes even if they're confused or shy to admit it.Ieachers should instead ask follow-up questions, let students explain concepts, or give short tasks or activities to see if they really understand the lesson.

3. Should teacher record results of formative assessment for grading purposes? Why or why not?
- I think teachers should record the results of formative assessments, but not use them directly for grading purposes. The main purpose of formative assessment is to monitor students' understanding and help them improve, not to judge their performance.Recording the results can help teachers track progress, identify learning gaps, and adjust their teaching methods.However, using these results for grades might cause students to focus more on getting high scores and memorizing information rather than truly understanding the lesson

4. Based on your observations, what formative assessment practice worked?
- Based on my observation, by asking questions and giving short activities helped the teacher quickly check students' understanding and correct misconceptions right away.

5. For formative assessment, why is peer tutoring in class sometimes seen to be more effective that teacher himself/herself doing the re-teaching or tutoring?
- I think peer tutoring is effective because students feel more comfortable with each other. They can easily ask questions, seek help, and explain lessons in simpler terms
using examples that are easier to relate to each other.

6. Could an unreasonable number of failures at the end of the term/grading period be the attributed to the non-application of formative assessment? Why or why not?

- Yes, too many failures at the end of the term can happen when formative assessments are not used. Regular formative assessments help teachers see who is struggling and need support. Without them, learning gaps are not addressed early, leading to poor performance of the students in the final evaluation.

REFLECT

- Formative assessment is tasting the soup while cooking. Reflect on this and write your reflections.

Formative assessment can be compared to tasting the soup while cooking because both involve checking progress and making necessary adjustments before reaching the final outcome. When a cook tastes the soup, it helps determine whether if there something is missing, or if the flavor is just right. This simple step ensures that the final dish turns out well. Similarly, formative assessment allows teachers to "taste" or monitor students' learning during instruction and not after the lesson.

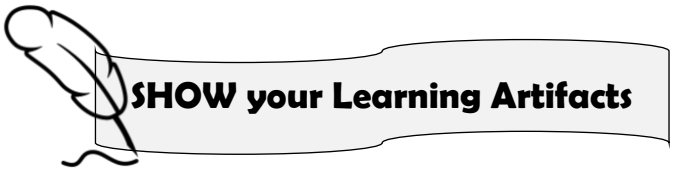

By doing so, The teachers can immediately see if there is a problem, who is struggling, what topics need to be revisited, and what teaching strategies should be adjusted. It gives teachers a clearer understanding of how effective their instruction is and helps them make timely improvements while learning is still ongoing. Waiting until the end of the grading period to assess, like tasting the soup only after it's cooked, may be too late to fix misunderstandings or improve performance.

As a future teacher, I realize that formative assessment is more than just giving quizzes or asking questions, it is about being observant, responsive, and supportive of students' learning needs. It helps teachers refine their methods, provide meaningful feedback, and guide students toward mastery. At the same time, it encourages students to reflect on their own progress, take responsibility for their learning, and become active participants in their educational journey.

- Should you record results of formative assessment? Why or why not?

I believe that recording the results of formative assessments is important, but they should not be used directly for grading purposes. The main goal of formative assessment is to guide learning, not to measure or judge it. By recording results, teachers can track students' progress, identify who needs more support, and adjust their teaching methods when necessary. It also serves as a tool for reflection—for both teachers and students—to see how learning is developing over time. However, if these results are used for grading, students might focus more on memorizing information or chasing high scores instead of truly understanding the lesson. As

a future teacher, I see formative assessment as a way to support learning growth rather than to evaluate it.

1. My Accomplished Observation Sheet

- During the observation, the teacher consistently checked the students' understanding by asking questions such as "Do you understand?" and by monitoring their reactions and participation. Some students showed signs of confusion, so the teacher responded by re-teaching the lesson using simpler explanations, relatable examples, visual aids, and even the Tagalog language to ensure comprehension. The teacher also encouraged students to ask questions and created an open, supportive environment for clarifications. Peer tutoring and one-on-one assistance were also implemented to help struggling learners. Throughout the session, the teacher walked around the classroom, observed group activities, and assessed learning through questioning and active engagement.

2. My Analysis

- Through my observation, I realized that teachers should consistently check students understanding during the lesson rather than waiting until the end, as this helps identify misconceptions early and make necessary adjustments in teaching. Simply asking "Did you understand?" is not effective because it limits responses, so teachersshould use follow-up questions, brief tasks, or discussions to gauge real comprehension. Recording formative assessments should focus on tracking progress instead of grading, as they serve as valuable tools for improving instruction and addressing learning gaps. Moreover, strategies like questioning, short activities, and peer tutoring help students clarify ideas, build confidence, and ensure that learning difficulties are resolved before the final evaluation.

3. My Reflection

- Reflecting on the idea that formative assessment is like tasting the soup while cooking, I understand that it allows teachers to monitor students' learning and make necessary adjustments before the lesson ends. Just as a cook tastes the soup to ensure the right flavor, teachers use formative assessment to identify learning gaps, clarify misunderstandings, and improve their teaching strategies while learning is still happening. Recording the results helps in tracking students' progress and guiding instruction, but it should not be used for grading since its main purpose is to support learning rather than measure it. As a future teacher, I see

formative assessment as a continuous process of observing, guiding, and refining both teaching and learning, helping students take responsibility for their growth and development.

4. Snapshots of peer tutoring or other activities that show formative assessment in practice.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

Activity 12.2

Observing Assessment AS Learning Practices (Self-Assessment)

Resource Teacher: **ROMMEL B. MANANING JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject: **SCIENCE**
Date:09/10/26

TARGET Your Intended Learning Outcome

At the end of this Episode, I must be able to:

- Demonstrate knowledge of the design and use of formative assessment; and
- Explain the importance of formative assessment.

REVISIT the Learning Essentials

- Assessment *as* learning means assessment is a way of learning.
- It is the use of an on-going self-assessment by the learners in order to monitor their own learning.
- This is manifested when learners reflect on their own learning and make necessary adjustments so that they achieve deeper understanding.
- Assessment *as* learning encourages students to take responsibility for their own learning.
- It requires students to ask questions about their learning.
- It provides ways for students to use formal and informal feedback and self-assessment to help them understand the next steps in learning.
- It encourages self-assessment and reflection.

OBSERVE

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

Observe a class and find out practices that reflect assessment *as* learning. Record your observations.

Teacher	My Observation
1. Did teacher provide opportunities for the learners to monitor and reflect on their own learning?	Yes, the teacher provided opportunities for the learners to monitor and reflect on their' own learning by facilitating a question-and-answer session after the group presentations Through this activity, students were able to assess their understanding of the topic, clarify misconceptions, and reflect on how well they comprehended the lesson based on the questions and feedback from the teacher.
2. What are proofs that student engaged in self-reflection, self-monitoring and self-adjustment?	The proofs that students engaged in self-reflection, self-monitoring, and self-adiustment were seen durina the question-and-answer session after each discussion. The teacher asked questions that helped students think critically about their understanding, showing self-reflection. Their ability to identify areas they struggled with demonstrated self-monitoring, while their attention to the teacher's feedback and wilingness to improve in future presentations showed self-adiustment
3. Did students record and report their own learning?	Yes, the students recorded and reported their own learning after their group presentations. They carefully noted the teacher's feedback and reflected on what aspects of their presentation were effective and what needed improvement Some groups even discussed how they could improve their delivery or content for future activities. This showed that they were actively monitoring their progress and taking responsibility for their own learning.
4. Did teacher create criteria with the students for tasks to be completed or skill to learn?	Yes, the teacher created criteria with the students so they could clearly understand expectations and assess their own performance effectively.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

Analyze

1. If the student is at the heart of all assessment, then all assessment should support student learning. Do you agree? Why or why not?

- Yes, I agree that if students are at the heart of all assessment, then every assessment should aim to support their learning.I believe that the true purpose of assessment is not just to measure what students know or to give them grades, but to help them grow by identifying their strengths and working on areas that need improvement.It becomes more meaningful when it guides both teaching and learning toward a deeper understanding and continuous progress.

2. Does assessment *as* learning have the same ultimate purpose as assessment *for* learning?

- No, assessment as learning and assessment for learning are both formative assessment that help to improve Ithe earning, however, they serve a different purposes.Assessment for learning is mainly used by teachers to check how well students understand the lesson through activities, quizzes, or performance tasks, and to adjust their teaching when needed. Meanwhile, assessment as learning allows students to reflect on what they have learned, recognize areas they need to work on, and take steps to improve. For example, after a science lesson, students filled out a reflection sheet where they wrote what they have learned, what onfused them, and what they want to learn more about next time.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 12

Reflect

The primary purpose of assessment is not to measure but to further learning. Reflect on your personal experience of assessment in school. Were you given opportunities for self-assessment? If yes, what was the impact on your learning?

- Reflecting on my personal experience, particularly in a subject handled by Ma'am Consuelo Saenz, I was given meaningful opportunities to assess my own learning through reflective journals. In these journals, we were asked to write about what we had learned, what we still wanted to learn, and the challenges or difficulties we encountered in understanding the lessons. This activity gave me the opportunity to pause and think deeply about my own learning journey. It helped me recognize not only the concepts I had understood but also the areas where I still needed to improve. Through this experience, I realized that assessment is not simply about measuring what a learner knows. It is also a process of reflection, self-understanding, and continuous growth as a learner.

SHOW your Learning Artifacts

1. My Accomplished Observation Sheet
- Based on my observation, it can be seen that the teacher provided opportunities for students to monitor and reflect on their own learning. Through question-and-answer sessions after group presentations, students were able to assess their understanding identify areas they struggled with, and respond to feedback to improve their performance.They also recorded and reported their learning, noting what worked well and what needed improvement. The teacher created clear criteria together with the students, allowing them to understand expectations and evaluate their own progress effectively

2. My Analysis

- From my observations, assessment as learning emphasizes students actively reflecting on their own progress.It focuses on helping learners grow by identifying strengths and areas for improvement, rather than just measuring knowledge or giving grades Unlike assessment for learning, which is mainly used by teachers to gauge understanding and adjust instruction, assessment as learning engages students in evaluating their own learning.For example, students may complete reflection sheets to note what they understood, what confused them, and what they want to explore
further. This approach supports continuous learning and encourages students to take responsibility for their own growth.

3. My Reflection

- Reflecting on my personal experience, particularly in a subject handled by Ma'am Consuelo Saenz, I was given meaningful opportunities for self-assessment through reflective journals. In these journals, we were asked to write what we had learned, what we still wanted to learn,and the challenges or difficulties we faced in understanding the lesson. This activity allowed me to pause and think deeply about my own learning process. It helped me recognize not only the concepts I understood but also the areas where I needed to improve.Through this experience, I realized that assessment is not just about measuring knowledge, it's about reflecting, understanding, and growing as a learner.
