OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

Assessment OF Learning (Summative Assessment)

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

SPARK Your Interest

Episode # 12 dwelt on Assessment *for* Learning (formative assessment) and Assessment *as* Learning (self-assessment). These refer to assessments that teachers do while still teaching and students' assessing their own learning. Episode # 13 will be focused on Assessment of Learning. When teachers have done everything they can to help learners attain the intended learning outcome/s, teachers subject their students to assessment for grading purposes. This is referred to as an assessment *of* learning which is also known a as **summative** assessment.

Episode # 13 will be focused on 1) assessment of learning in the cognitive, psychomotor, and affective domains with the use of traditional and non-traditional assessment tasks and tools, 2) assessment of learning outcomes in the different levels of cognitive taxonomy; 3) construction of assessment items with content validity; 4) Table of Specifications; 5) Portfolio, 6) Scoring Rubrics, 7) The K to 12 Grading system and 8) reporting Students' Performance.

TARGET Your Intended Learning Outcome

At the end of this episode, I must be able to demonstrate an understanding of the design, selection, organization, and use of summative strategies consistent with the curriculum requirements by being able to:

- Determine the alignment of assessment tools and tasks with intended learning outcomes;
- Critique traditional and authentic assessment tools and tasks for learning in the context of established guidelines on test construction;
- Evaluate non-traditional assessment tools including scoring rubrics;
- Examine different types of rubrics used and relate them to the assessment of student learning;
- Distinguish among the 3 types of learners' portfolios;
- Evaluate sample portfolio;
- Construct assessment questions for HOTS following Bloom's Taxonomy as revised by Anderson and Krathwohl and Kendall's and Marzano's Taxonomy;
- Explain the function of a Table of Specifications;
- Distinguish among types of learners' portfolio and their functions;

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

- Compute students' grade based on DepEd's grading policy;
- State the reason(s) why grades must be reported to parents; and describe what must be done to make grade reporting meaningful.

OBSERVE, ANALYZE, REFLECT

Activity 13.1

Aligning Assessment Task with the Learning Outcome

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature:

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject: **SCIENCE** Date:

TARGET Your Intended Learning Outcome

- Determine alignment of assessment task with learning outcome.
- Formulate assessment task aligned with the learning outcome.

REVISIT the Learning Essentials

- In accordance with Outcome-Based Teaching-Learning, the learning outcome determines assessment task.
- Therefore, the assessment task must necessarily be aligned to the learning outcome.

OBSERVE

1. Observe at least 3 classes - 1 Physical or Biological Science or Math, English, Filipino; 1 Social Science or Literature/Panitikan, EsP and 1 P.E/Computer /EPP/ TLE.

Subjects	Learning Outcome/s	Assessment Task (How did the Teacher assess the	Is the assessment tool/task aligned	If not aligned, improve on it.

		learning outcome/s? Specify.	**to the learning outcome/s?**	
P.E/EPP/TLE	To dance tango	Written quiz- Enumerate the steps of tango in order	No	Performance test – Let students dance tango.
Subjects	**Learning Outcome/s**	**Assessment Task (How did the Teacher assess the learning outcome/s? Specify.**	**Is the assessment tool/task aligned to the learning outcome/s?**	**If not aligned, improve on it.**
Filipino	The teacher expected the students to explain the main concepts, relate them to every situations, and present their understanding clesrly through a group presentation. The teacher also expected each member to participate	The teacher asked the students to prepare and deliver a short presentation. They explained the main idea, presented relevant examples, and appropriate visual aid. The teacher assessed their work using 100 point rubrics.	Yes	—

	and cooperate with the group			
Science	The students should be able to identify, describe, and explain the structure and layers of the Earth through a creative 3D model, demonstrating understanding of Earth's crust, mantle, outer core, and inner core.	At the end of the lesson, the teacher made the students create a 3D model of rge Earth crust to demonstrate their understanding and mastery of the concepts.	Yes	—

ANALYZE

1. Are all the assessment tasks aligned to the learning outcome?
- Yes. All the assessment tasks are aligned to the learning outcome because the task given, particularly in the Filipino subject by delivering a short presentation where they explained the main ideas of the concept and present relevant examples relating them to real-life situations which are the stated learning outcomes.

2.What are possible consequences if the teacher's assessment tasks are not aligned to learning outcome/s? Does this affect assessment results? How?
- Assessment tasks should be aligned to the learning outcomes so that teachers can accurately measure what students have learned. This ensures fair grading and helps teachers know if their teaching was effective.

3. Why should assessment tasks be aligned to the learning outcomes?
- This observation helped me understand the importance of aligning assessment tasks with learning outcomes. It made me more careful in planning and checking if my activities and assessments truly measure what students are expected to learn. Because aligning the

assessment tasks is crucial in determining if the students were able to understand the lesson you delivered. This is where we also assess our efficiency and effectiveness as a teacher.

- Reflect on past assessments you have been through. Were they all aligned with what your teacher taught (with learning outcomes)?

- This observation helped me understand the importance of aligning assessment tasks with learning outcomes. It made me more careful on planning and checking if my activities and assessments truly measure what students are expected to learn.

- How did this affect your performance? As a future teacher, what lesson do you learn from this experience and this observation?

- Through this experience, I realized the importance of creating clear learning objectives and aligning them with assessment tasks. This helped me understand that when objectives and assessments are properly aligned, students' learning becomes more effective, and their performance improves. As a future teacher, I learned that careful alignment ensures that my teaching truly supports students in achieving the intended learning outcomes.

Activity 13.2 **Observing the use of Traditional Assessment Tools**

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject: **SCIENCE** Date: _____

TARGET Your Intended Learning Outcome

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

- Critique traditional assessment tools and tasks for learning in the context of established guidelines on test construction.

REVISIT the Learning Essentials

- Traditional assessment tools are also called paper-and-pencil tests.
- Traditional assessment tools usually measure learning in the cognitive domain.
- Traditional or paper-and-pencil tests can be classified either as selected-response tests or constructed-response/supply types of tests.
- Common examples of selected-response types of tests are alternate response tests (True-False, yes-no), multiple choice, and matching type of test.
- Common examples of constructed-response types of tests are short answers, problem-solving, and essays.

OBSERVE

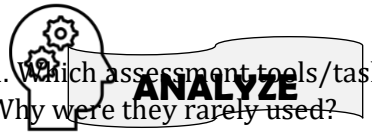

1. Observe classes and pay particular attention to the assessment tool used by the teacher.
2. With teacher's permission, secure a copy of the assessment tool.

Direction: Put a check (/) on the test that which teacher used. From your teacher's test items, give an example.

Type of Traditional Assessment Tool/Paper-and-Pencil Test	Put a check (/) Here	Learning Outcome Assessed	Sample Test Item of Resource Teacher	Comments (Is the assessment tool constructed in accordance with established guidelines?) Explain your answer.
Selected Response Type				
1. Alternate response		—	—	Not observes in the periodical examination provided. No true or false or similar alternate-response items were found.

2. Matching type		—	—	Not observes in the periodical examination provided. No matching type was found.
3. Multiple Choice	/	Recall and understanding of scientific concepts, laws, relationships, and applicable	"What is Inertia?" A. The property of a body to resist a change in its current state . B. The measurement of how fast an object's velocity changes through time. C. A oush or pull acting upon an object. D. The amount of electric charge passing through a material per unit time.	The itemd are clearly formatted with one question and four alternatives. The choices are closesly related to the concepts.
4. Others		—	—	No other format was fpund in the examination.
Type of Traditional Assessment Tool/Paper-and-Pencil Test	Put a check (/) if Resource Teacher used it.	Learning Outcome Assessed	Sample Test Item of Resource Teacher	Comments (Is the assessment tool constructed in accordance with established guidelines?) Explain your answer.
Constructed-Response Type				
1. Completion	NOT OBSERVED	NOT OBSERVED	NOT OBSERVED	NOT OBSERVED

2. Short answer type	/	Differentiate the tectonic plate boundaries.	—	Yes. The the short type answer provdes necessary information and requires learner to think critically.
3. Problem solving	NOT OBSERVED	NOT OBSERVED	NOT OBSERVED	NOT OBSERVED
4. Essay-restricted	NOT OBSERVED	NOT OBSERVED	NOT OBSERVED	NOT OBSERVED
5. Essay-non-restricted	NOT OBSERVED	NOT OBSERVED	NOT OBSERVED	NOT OBSERVED

1. Which assessment tools/tasks were most commonly used by teacher? Which ones were rarely used? Why were they rarely used?

-The assessment tools that were rarely or not observed were true-or-false/alternate response, matching type, problem-solving, and essay tests. These may have been rarely used because multiple-choice and short-answer questions are more practical to administer and check, especially when assessing a large number of students.

The assessment tools that were rarely or not observed were true-or-false/alternate response, matching type, problem-solving, and essay tests. These may have been rarely used because multiple-choice and short-answer questions are more practical to administer and check, especially when assessing a large number of students.

2. Based on your answers found in the Tables above in which type of assessment tools and tasks were the Resource Teachers most skilled in test construction? Least skilled?

- Based on the table, the Resource Teacher appeared to be most skilled in constructing multiple-choice items. The item observed had one clear question and four alternatives that were related to the concept being assessed.

The teacher appeared least experienced or least skilled in the other assessment formats, such as alternate-response, matching, problem-solving, and essay types, since these were not observed in the examination provided. However, this does not necessarily mean that the teacher cannot construct these types of assessments; they were simply not evident in the assessment examined.

3. Can an essay or other written requirements, even if it is a written paper-and-pencil test, be considered an authentic form of assessment? Explain your answer.

- Yes, an essay or other written requirement can be considered an authentic form of assessment, depending on how the task is designed. A paper-and-pencil format does not automatically make an assessment traditional or unauthentic. If the essay requires students to apply their knowledge, explain their reasoning, analyze a situation, solve a real-life problem, or connect the lesson to actual experiences, it can demonstrate authentic learning. What matters is the nature of the task and the learning it requires, not simply whether the answer is written on paper.

ANALYZE

How good are you at constructing traditional assessment tools? Which do you find most difficult to construct? Any lesson/s learned?

- I'm quite good at making traditional tests like multiple-choice and true-or-false questions since they're clear and easy to check. The hardest for me is creating essay questions because they need to be clear, balanced, and aligned with the lesson goals. I learned that good assessments should truly measure what students have learned and give them a fair chance to show their understanding.

Activity 13.3

Observing the use of Non-traditional Assessment Tools and Scoring Rubrics

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level:**9** Subject: **SCIENCE**Date:09/28/26

TARGET Your Intended Learning Outcome

- Evaluate non-traditional assessment tools including scoring rubrics.

REVISIT the Learning Essentials

- There are learning outcomes that cannot be assess by traditional assessment tools.
- Authentic/nontraditional/alternative assessment tools measure learning outcomes like performance and product.
- These performance task and product are assesse by the use of scoring rubric.
- A rubric is a coherent set of creteria for student's work that includes descriptions of levels of performance quality on the creteria. (Brookhart, 2013)
- The main purpose of rubrics is to assess performances and products.
- There are two types of reubrics – analytic and holistic. Analytic rubrics describe work on each criterion separately while a holistic rubric assesses a students work as a whole.
- For diagnostic purposes, the analytic rubric is more appropriate.
- For holistic view of a product or performance, the holistic rubric will do.
- A good scoring rubric contains the cretiria agaisnt which the product or perfomance is rated, the rating scale and a sdescription of the leb=vels of [illegible]mance.

OBSERVE

3. Observe classes in at least 3 different subjects and pay particular attention to the assessment tool used by the teacher.
4. With teacher's permission, secure a copy of the assessment tool.
5. Study the assessment tool then accomplish the Observation Sheet.
6. Did your Resource Teacher explain the rubric to the students?
7. Which type of rubric did the Resource Teacher use - analytic or holistic?

Authentic Assessment/Non -	Learning Outcome Assessed	Sample of Product/Performance Assessed	How a product/perform	Comment/s (Is the scoring

Edited by: CRSaenz

Traditional/Alternative		**One example of a product assessed. (Put a photo of the product/documented performance in *My Teaching Artifacts.* INCLUDE THE RUBRIC IN MY TEACHING ARTIFACTS**	ance was assessed **Describe how the product/performance was assessed. Which was used analytic rubric or holistic rubric? INCLUDE THE RUBRIC IN MY TEACHING ARTIFACTS.**	rubric constructed according to standards?
1. Product-	The students should be able to identify, describe and explain the structure of the Earth through a creative 3D model, demonstrating understanding of the Earth's crust, mantle, outer core, and inner core.		The student's 3D creative presentation was assessed using an analytic rubric, in which the teacher evaluated content accuracy, creativity, organization, use of materials, and completeness separately. Each criterion was assigned a rating based on its corresponding performance level, with a	Yes, the scoring rubric is well-constructed and follows the standards because it includes clear assessment criteria, a rating scale, and descriptions of different performance levels. It evaluates both the accuracy

			total score of 100 points.	of the content and the quality of the learners' performance.
2. Performance	Present your understanding clearly through a group presentation.	—	—	—

1. Between analytic and holistic rubrics which one was more used? Why do you think that type of rubric was used more?

- Analytic rubrics were more commonly used. This is because they provide a more detailed and objective assessment of students' performance by breaking down the criteria into specific components.Teachers can easily identify which areas students excel in and which need improvement. It also helps ensure fairness and transparency since each criterion is clearly described and scored individually.

2. Based on your answers in # 1, what can you say about the scoring rubrics made and used by the Resource Teachers?
- The scoring rubrics used by the Resource Teachers were well-structured and aligned with the learning outcomes.They were clear, comprehensive, and consistent with the performance tasks. The rubrics guided both teachers and students in understanding the standards and expectations, promoting accountability and quality performance.

3. Will it make a difference in the assessment of student work if the teacher rates the product or performance without scoring rubrics? Explain.
- Yes, it will make a significant difference. Without scoring rubrics, assessment may become subjective and inconsistent because there would be no clear basis for evaluating student performance. Rubrics ensure that grading is fair, reliable, and aligned with learning objectives, They also provide feedback that helps students understand their strengths and areas for improvement.

4. If you were to improve on one scoring rubric used, which one and how?
- I would improve the analytic rubric used for group presentations by adding a criterion for collaboration and participation. This would ensure that all group members are equally evaluated based on their individual contributions, teamwork, and cooperation.Adding clear descriptors for these aspects would promote fairness and accountability during group activities.

5. Can an essay or other written requirements, even if it is a written paper-and-pencil test, be considered an authentic form of assessment? Explain your answer.
- Yes, an essay or written requirement can be considered an authentic form of assessment if it allows students to express their understanding, apply concepts, and demonstrate higher-order thinking skils.Unlike objective tests, essays require students to organize ideas, analyze information, and communicate their thoughts effectively—skills that are valuable in real-world contexts.

6. Can rubrics help make students become self-directed or independent learners? Do rubrics contribute to assessment AS learning (self-assessment) What if there were no rubrics in assessment?
- Yes, rubrics help students become self-directed learners because they clearly show what is expected and how their work will be evaluated.By using rubrics, students can monitor their own progress, identify their strengths, and improve their weaknesses-making learning more reflective and independent. Rubrics also promote assessment as learning, since students actively use the criteria for self-assessment.Without rubrics, students might be unsure of standards and expectations, leading to confusion and less meaningful feedback.

7. Does the Scoring Rubric in this FS Book 1 help you come up with better output?
- Yes, the scoring rubric in this FS Book 1 helped me produce better outputs because it served as a clear guide in meeting the required standards. It helped me understand what aspects to focus on, such as clarity, organization, and completeness, allowing me to plan and improve my work before submission.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

Are authentic assessment tools and tasks new? Reflect on your experiences of tests for all the years as a student.

Authentic assessment tools and tasks are not entirely new, but their use has become more emphasized in recent years. In my earlier years as a student, most assessments were traditional like quizzes, multiple-choice tests, and exams that mainly measured memorization. However, as I progressed, teachers began using performance tasks, projects, and presentations that required applying knowledge to real-life situations. These authentic assessments felt more meaningful because they allowed me to demonstrate understanding through creativity, problem-solving, and practical application rather than just recalling facts

- Accomplished Observation Sheet

Episode 13 - Assessment OF Learning (Summative Assessment)

Criteria	Description	Points
Scientific Accuracy	The model correctly represents the assigned plate boundary, including the proper movement of tectonic plates and the geological processes involved.	35
Completeness of the Model	Important features of the plate boundary are shown, such as the plates, direction of movement, crust, mantle, and related landforms or features when applicable.	25
Labels and Direction of Movement	Major parts are clearly and correctly labeled. Arrows or other indicators clearly show how the plates move.	15
Creativity and Visual Appeal	The model is visually attractive, creative, organized, and uses appropriate materials effectively.	15
Craftsmanship and Durability	The model is neat, stable, well-constructed, and shows careful effort in its preparation.	10
TOTAL		100 points

Activity 13.4 Scrutinizing the Types and Parts of a Portfolio

Resource Teacher: **EOMMEL B. MANINANG JR.** Teacher's Signature:

School: **ABANO LABORATORY SCHOOL** Grade/Year Level: **9** Subject Area: **SCIENCE** Date:9/28/26

TARGET Your Intended Learning Outcome

- Evaluate a sample portfolio
- Distiguish among the 3 types of portfolio.

DISCOVER the Learning

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

- A portfolio is a purposeful collection of selective significant samples of student work accompanied by clear criteria for performance that prove student effort, progress, or achievement in a given area or course.
- A portfolio of student's work is direct evidence of learning. But it is not a mere collection of student's work. The students's reflections must accompany each output or work.
- A portfolio is different from *a work folder,* which is simply a receptacle for all work, [illegible] purpose to the collection. A portfolio is an intentional collection of work [illegible] learning objectives.
- Effective portfolio systems are characterized by a cheaper picture of the student's skills to be addressed, student involvement in selecting what goes into the portfolio, use of criteria to define quality performance as a basis for communication, and self-reflection through which students share what they think and feel about their work, their learning and about themselves.
- There are several types of portfolios depending on purpose. They are: 1) development or growth portfolio, 2) best work or showcase or display portfolio, and 3) assessment/evaluation portfolio.

OBSERVE

1. Ask your Resource Teacher for samples of portfolio, if any. If there is, select one best portfolio from what you examined.
2. If none, research for a sample portfolio and include them in *My Learning Artifacts*.
3. Based on the sample portfolio given by your Resource Teacher/researched by you, accomplish Observation Sheet #
4. Put a check in the right column.

What a Portfolio Includes

Elements of a Portfolio	Present?	Missing?
1. Clear objectives – The objectives of the lesson/unit/course are clear which serve as a bases for selection.	/	
2. Explicit guidelines for selection – What, when, where how are products/documented performances selected?	/	
3. Comprehensible criteria-the criteria against which the portfolio is graded must be understood by the learners.	/	
4. Selective significant pieces – The portfolio includes only the selected significant materials.	/	
5. Student's reflection – There is evidence that students reflected on their learning.	/	
6. Evidence of student participation in selection of content of portfolio – There is proof that the students took part in the selection of the content of the portfolio.		/

ANALYZE

Edited by: CRSaenz

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

1. With OBE in mind, which should be the basis for the selection of pieces of evidence to show that what the student was supposed to learn was learned?

- The basis for selecting evidence in OBE should be the learning outcomes and performance standards. Evidence must show how students applied what they learned to demonstrate mastery of the intended competencies.

2. Scrutinize the elements of this portfolio. Based on the parts, under which type of portfolio does this fall?

-This portfolio is best described as an assessment portfolio since it contains a compilation of students' outputs, performance tasks, and written works that serve as concrete evidence of learning outcomes achieved throughout the course.

Elements of a _____Portfolio (Which type of Portfolio)
1. Cover Letter- "About the Author" and "What My Portfolio Shows About My Progress as a Learner" After the cover page, the portfolio includes a Student Profile section divided into "About the Author" and "My Progress as a Learner." The first part provides personal details and interesting facts about the student, while the second part highlights the learner's goals and motivation to improve academic performance and learning outcomes.
2. Table of Contents with numbered pages The portfolio demonstrates a clear sense of organization by grouping outputs into specific sections. However, it lacks a formally numbered Table of Contents. A more detailed list of contents would further improve accessibility and navigation.
3. Entries-both core (required items) and optional items (chosen by students). The portfolio includes a wide range of learning outputs, such as written works (homework, quizzes, and seatwork) and performance tasks. These entries reflect both required and self- selected tasks that showcase the student's effort, understanding, and creativity throughout the quarter.
4.Dates on all entries to facilitate proof of growth over time - Some entries are dated, but not all outputs include dates. Adding consistent dates to all entries would provide clearer evidence of progress and growth over time.

5. Drafts of aural/oral and written products and revised revisions, i.e. (first drafts and corrected/revised versions.) - The portfolio contains both initial drafts and revised versions of written works, often reviewed by peers. These revisions demonstrate the student's learning progress, critical thinking, and ability to apply feedback to improve performance and understanding.
6. Student's Reflections - The portfolio concludes with a section titled "Enhanced Science 9 Third Quarter Reflection." In this part, the student expresses insights and realizations gained from the lessons

3. Where and when does the teacher make use of each of the 3 types of portfolio?

- Teachers use a working portfolio during the learning process to collect students' ongoing works and tracks their progress. A showcase portfolio is used at the end of a term or project to display students' best or most improved works. Meanwhile, an assessment portfolio is used after instruction to evaluate overall performance and determine if learning outcomes were achieved.

Have portfolios made the learning assessment process more inconvenient? Is the effort exerted on portfolio assessment commensurate to the improvement of learning and development of the learner's metacognitive process that results from the use of a portfolio?

- Portfolios haven't made the assessment process inconvenient for me; in fact, I find them more meaningful and reflective. Even though creating and evaluating portfolios takes extra time and effort, I can really see my own growth and understand exactly where I need to improve. I feel that the effort is worth it because it helps me think more deeply about my learning, reflect on my progress, and take more responsibility for my own development. Using portfolios has made me more aware of my strengths and areas to work on, and I feel more confident in my ability to learn and grow.

- Sample/s of improved Written Tests, both selected-response type and supply type.
- Sample/s of product and performance assessed

- Sample/s of a rubric

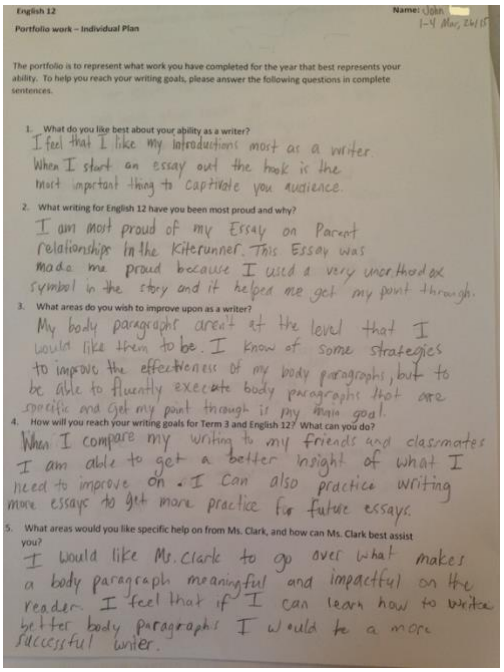

Criteria	Description	Points
Scientific Accuracy	The model correctly represents the assigned plate boundary, including the proper movement of tectonic plates and the geological processes involved.	35
Completeness of the Model	Important features of the plate boundary are shown, such as the plates, direction of movement, crust, mantle, and related landforms or features when applicable.	25
Labels and Direction of Movement	Major parts are clearly and correctly labeled. Arrows or other indicators clearly show how the plates move.	15
Creativity and Visual Appeal	The model is visually attractive, creative, organized, and uses appropriate materials effectively.	15
Craftsmanship and Durability	The model is neat, stable, well-constructed, and shows careful effort in its preparation.	10

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

English 12 — Name: John
Portfolio work – Individual Plan — 1-4 May, 2015

The portfolio is to represent what work you have completed for the year that best represents your ability. To help you reach your writing goals, please answer the following questions in complete sentences.

1. What do you like best about your ability as a writer?
I feel that I like my introductions most as a writer. When I start an essay out the hook is the most important thing to captivate you audience.

2. What writing for English 12 have you been most proud and why?
I am most proud of my Essay on Parent relationships in the Kiterunner. This Essay was made me proud because I used a very unorthodox symbol in the story and it helped me get my point through.

3. What areas do you wish to improve upon as a writer?
My body paragraphs aren't at the level that I would like them to be. I know of some strategies to improve the effectiveness of my body paragraphs, but to be able to fluently execute body paragraphs that are specific and get my point through is my main goal.

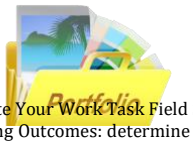

4. How will you reach your writing goals for Term 3 and English 12? What can you do?
When I compare my writing to my friends and classmates I am able to get a better insight of what I need to improve on. I can also practice writing more essays to get more practice for future essays.

5. What areas would you like specific help on from Ms. Clark, and how can Ms. Clark best assist you?
I would like Ms. Clark to go over what makes a body paragraph meaningful and impactful on the reader. I feel that if I can learn how to write better body paragraphs I would be a more successful writer.

Activity 13.5

Determining the Level of Teacher's Questions

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject Area: **SCIENCE** Date: 9/28/26

TARGET Your Intended Learning Outcome

- Construct assessment questions to measure HOTS following Bloom's and Anderson's revised taxonomy and Kendall's and Marzano's taxonomy.

REVISIT the Learning Essentials

Table: 1.4 Example of Cognitive Activities

Cognitive Process	Examples
Remembering – Produce the right information from memory	
Recognizing	
Recalling	• Name three 19th-century women English authors. • Write the multiplication facts. • Reproduce the chemical formula for carbon tetrachloride.
Understanding – Make meaning from educational materials or experiences	
Interpreting	• Translate a story problem into an algebraic equation. • Draw a diagram of the digestive system. • Paraphrase Jawaharlal Nehru's tryst with destiny speech.
Exemplifying	• Draw a parallelogram. • Find an example of stream-of-consciousness style of writing. • Name a mammal that lives in our area.
Classifying	• Label numbers odd or even. • List the events of the Sepoy Mutiny of 1857.

	• Group native animals into their proper species.
Inferring	
Comparing	• Explain how the heart is like a pump. • Compare Mahatma Gandhi to a present-day leader. • Use a Venn diagram to demonstrate how two books by Charles Dickens are similar and different.
Explaining	• Draw a diagram explaining how air pressure affects the weather. • Provide details that justify why the French Revolution happened when and how it did. • Describe how interest rates affect the economy.
Applying – Use a procedure	
Executing	• Add a column of two-digit numbers. • Orally read a passage in foreign language. • Have a student open house discussion.
Implementing	• Design an experiment to see how plants grow in different kinds of soil. • Proofread a piece of writing. • Create a budget.
Analyzing – Break a concept down into its parts and describe how the parts relate to the whole	
Differentiating	• List the important information in a mathematical word problem and cross out the
Organizing	• Place the books in the classroom library into categories. • Make a chart of often-used figurative devices and explain their effect. • Make diagram showing the ways plants and animals in your neighborhood interact with each other.
Attributing	• Read letters to the editor to determine the authors' points of view about a local issue. • Determine a character's motivation in a novel or short story. • Look at brochures of political candidates and hypothesize about their perspective on issues.
Evaluating – Make judgments based on criteria and syllabus guidelines	

Checking	• Participate in writing group, giving peers feedback on organization and logic or arguments. • Listen to a political speech and make a list of any contradictions within the speech. • Review a project plan to see if all the necessary steps are included.
Critiquing	• Judge how well a project meets the criteria of a rubric. • Choose the best method for solving a complex mathematical problem. • Judge the validity of arguments for and against astrology.
Creating – Put pieces together to form something new or recognize components of a new structure	
Generating	• Given a list of criteria, list some options for improving race relations in the school. • Generate several scientific hypotheses to explain why plants need sunshine. • Propose a set of alternatives for reducing dependence on fossil fuels that address both economic and environmental concerns. • Come up with alternative hypotheses based on criteria.
Planning	• Make a storyboard for a multimedia presentation on insects. • Outline a research paper on Mark Twain's views on religion. • Design a scientific study to test the effect of different kinds of music on hens' egg production.
Producing	• Write a journal from the point of view of mountaineer. • Build a habitat for pigeons. • Put on a play based on a chapter from a novel you're reading.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

The New Taxonomy (Marzano and Kendall, 2007)

Complexity

Level of Difficulty		Process	Useful Verbs, Phrases, Definitions
	6 Self System Thinking	Examining Importance	The student can analyze how important specific knowledge is to them.
		Examining Efficacy	The student can examine how much they believe they can improve their understanding of specific knowledge.
		Examining Emotional Response	The student can identify emotional responses associated with a piece of knowledge and determine why those associations exist.
		Examining Motivation	The student can examine their own motivation to improve their understanding or competence in specific knowledge.
	5 Metacognition	Specifying Goals	The student can set specific goals relative to knowledge and develop a plan for accomplishing the goal.
		Process Monitoring	The student can self-monitor the process of achieving a goal.
		Monitoring Clarity	The student can determine how well they understand knowledge.
		Monitoring Accuracy	The student can determine how accurate their understanding of knowledge is and defend their judgment.
Cognitive System	4 Knowledge Utilization	Investigating	investigate; research; find out about; take a position on; what are the differing features of; how & why did this happen; what would have happened if The student generates a hypothesis and uses the assertions and opinions of others to test the hypothesis.
		Experimenting	experiment; generate and test; test the idea that; what would happen if; how would you test that; how would you determine if; how can this be explained; based on the experiment, what can be predicted The student generates and tests a hypothesis by conducting an experiment and collecting data.
		Problem-Solving	solve; how would you overcome; adapt; develop a strategy to; figure out a way to; how will you reach your goal under these conditions The student can accomplish a goal for which obstacles exist.
		Decision-Making	decide; select the best among the following alternatives; which among the following would be the best; what is the best way; which of these is most suitable The student can select among alternatives that initially appear to be equal and defend their choice.
	3 Analysis	Specifying	make and defend; predict; judge; deduce; what would have to happen; develop an argument for; under what conditions The student can make and defend predictions about what might happen.
		Generalizing	what conclusions can be drawn; what inferences can be made; create a principle, generalization or rule; trace the development of; form conclusions The student can infer new generalizations from known knowledge.
		Analyzing Errors	identify errors or problems; identify issues or misunderstandings; assess; critique; diagnose; evaluate; edit; revise The student can identify and explain logical or factual errors in knowledge.
		Classifying	classify; organize; sort; identify a broader category; identify different types /categories The student can identify super ordinate and subordinate categories to which information belongs.
		Matching	categorize; compare & contrast; differentiate; discriminate; distinguish; sort; create an analogy or metaphor The student can identify similarities and differences in knowledge.
	2 Comprehension	Symbolizing	symbolize; depict; represent; illustrate; draw; show; use models; diagram chart The student can depict critical aspects of knowledge in a pictorial of symbolic form.
		Integrating	describe how or why; describe the key parts of; describe the effects; describe the relationship between; explain ways in which; paraphrase; summarize The student can identify the critical or essential elements of knowledge.
	1 Retrieval	Executing	use; demonstrate; show; make; complete; draft The student can perform procedures without significant errors.
		Recalling	exemplify; name; list; label; state; describe; who; what; where; when The student can produce information on demand.
		Recognizing	recognize (from a list); select from (a list); identify (from a list); determine if the following statements are true The student can determine whether provided information is accurate, inaccurate or unknown.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject: **SCIENCE** Date:9/28/26

1. Observe a teacher in the classroom.
2. Note his/her questions both oral and written.
3. Score him/her according to the level of questions that he/she asks from remembering to creating and metacognition and self-system thinking. You may also refer to written tests for samples of questions in the various levels.
4. Make tally, then get the total. Use Table 1 and Table 2 separately.

Table 1. Number of Questions per Level.

Cognitive Processes (Bloom as revised by Anderson and Krathwohl)	Rank	Cognitive Processes (and Kendall and Marzano)	Rank	Tally of Assessment Task/Questions	Total
		Self-system Thinking	6		
		Metacognition	5		
Creating	6-Highest				
Evaluating	5				
Analyzing/An	4	Analysis	3	/	
Applying	3	Knowledge Utilization	4		
Understanding/	2	Comprehension	2	/	
Remembering?	1-Lowest	Retrieval	1	////-Example	4

Table 2. Examples of Assessment Questions/Assessment Tasks

Cognitive Processes (Bloom as revised by Anderson and Krathwohl)	Rank	Tally and Total Score of Cognitive Processes (Kendall and Marzano)	Rank	Example of Assessment Tasks/Questions Given by Resource Teacher	Rank Based on Use
Self-system Thinking	6 Highest	Self-system Thinking	6-Highest	No questions observed that directly asked the students to reflect on personal important of the lesson.	
Metacognition	5	Metacognition	5	No questions observed that directly asked the students to reflect on personal important of the lesson.	
Examples: Creating = I	6-Highest			No direct creating-level was recorded.	
Evaluating = I	5		3	He asked the students to give their own judgement or answer after discussing the lesson.	1
Analyzing/An = II	4		4	The teacher asked a follow up questions that required students to explain and elaborate their answer instead	2

				on just simply giving an answer.	
Applying = II	3		2	The teacher aksed the students to connect the lesson to real-life situations.	3
Understanding = II	2		1-Lowest	The teacher asked the students to explain their answers using their own understanding.	4
Remembering = IIIII	1-Lowest		Rank	The teacher asked the students about their past lesson prior to the lesson to that day.	5

1. Which cognitive skills had the highest number of assessment questions? Lowest number?

- The Remembering level had the highest number of assessment questions, with 4 questions, while Evaluating had the lowest, with only 1 question. The other skills—Understanding, Applying, and Analyzing—each had 2 questions.

2. What do these (lowest and highest number of assessment questions) reveal about Resource Teacher's level of questions?

- The data show that the Resource Teacher used more questions that focus on recalling information than on higher-order thinking. The high number of Remembering questions suggests that students were often asked to recall previous lessons or basic information, while the low number of Evaluating questions shows that there were fewer opportunities for students to give judgments, defend their ideas, or make deeper assessments. This suggests that the teacher could include more higher-order questions to further develop students' critical and analytical thinking skills.

3. Based on Kendall's and Marzon's taxonomy, which are the highest cognitive skills? Give an example of an assessment question for each of the two highest cognitive skills-metacognitive skills and self-system thinking.

- According to Kendall and Marzano, the highest cognitive skills are Metacognitive Skills and Self-system Thinking. Examples of assessment questions for these skills are:

Metacognitive Skills: "Which part of today's lesson was hard for you to understand?"

Self-system Thinking: "Why is the lesson important to you?

If you were to rate yourself on HOTS – where will you be from a scale of 1 to 5 (5 as highest) where will you be?

- I would rate myself a 4 out of 5 in Higher-Order Thinking Skills (HOTS). I feel capable of analyzing, evaluating, and applying knowledge effectively, although I know there is still room to further develop my creativity and reflective thinking.

  As a future teacher, reflect on how will you contribute to the development of learners' HOTS?

- I plan to help students strengthen their HOTS by creating learning experiences that encourage critical thinking, problem-solving, and real-world application. I will ask thought- provoking questions, promote discussions, and design projects and performance tasks that require students to analyze, evaluate, and create. My goal is to foster a classroom environment where learners are curious, independent, and confident in applying their knowledge to meaningful situations.

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

Activity 13.6

Analyzing a Table of Specifications

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject: **SCIENCE** Date:9/28/26

TARGET Your Intended Learning Outcome

- Explain the function of a Table of Specifications

REVISIT the Learning Essentials

- Table of Specifications (TOS) is a two-way chart that describes the topics to be covered by a test and the number of items or points that will be associated with each topic.
- Sometimes the topic of items is described in terms of cognitive level as well.

1. Study the sample Table of Specifications on Assessment

Learning Outcome	No. of Class Hours	Cognitive Level						Total
		Rem	Un	Ap	An	Ev	Cr	
1. **Lesson 1:** Force, Motion, and Newton's Laws Inertia and Equilibrium Acceleration and Force Newton's Laws of Motion Action-Reaction Forces	6	12	6	0	—	—	—	18

2. Lesson 2: Electricity and Electric Circuits Battery, Electric Current, and EMF Direct and Alternating Current Series Circuits Parallel Circuits Series-Parallel Circuits	7	6	0	15	—	—	—	21
3. Lesson 3: Electromagnetic Waves Electromagnetic Spectrum Frequency and Wavelength	2	4	2	0	—	—	—	6
Total	15	22	8	15	—	—	—	45

1. What parts must a TOS contain to ensure test content validity?

- A Table of Specification (TOS) must include the learning outcomes or competencies, content topics or subtopics, cognitive levels (e.g., remembering, understanding, applying), and the number of items or weight per topic and cognitive level. These components ensure the test covers all intended areas and accurately measures what students are expected to learn.

2. Why is there a need for several items per cognitive level?

- Having several items per cognitive level increases the reliability and fairness of the test. It allows students multiple opportunities to demonstrate their abilities, reduces the chance of guessing.and provides a clearer picture of their mastery of knowledge, skills, and higher-order thinking.

3. With OBE in mind, is it correct to put learning outcomes not topic in the first column? Why or why not?

- Yes, it is correct. Outcome-Based Education focuses on whether students achieve specific learning outcomes rather than simply covering topics. Placing learning outcomes in the first column ensures that the assessment aligns with what students are expected to know and be able to do.

4. Can a teacher have test with content validity even without making a TOS?

- Yes, a teacher can still create a test with content validity without a formal TOS. However, without a TOS, it is harder to systematically ensure that all learning outcomes are represented and that items are properly balanced across content and cognitive levels.

5. Complete the given TOS?

- To complete a TOS, a teacher lists all learning outcomes in the first column, identifies corresponding topics or subtopics, assigns cognitive levels for each item, determines the number of items per outcome and level, and calculates the percentages or weights. This ensures that the test fairly represents all intended learning objectives and cognitive skills.

Read this conversation and reflect on teachers' assessment practices. Write your reflections here.

Student A: *Saan naman pinulot ni Teacher ang kaniyang tanong? Ni-isang tanong sa tinuro, wala!* (Where did Teacher get her test? Not one of what she taught came out!)

Student B*: OO nga.! Nakakainis!* (You are right! How annoying!")

Did you have a similar experience? Reflect on it. Will the required use of Table of Specifications as guide in test construction solve the problem of misaligned tests?

- Yes, I have experienced taking a test where many of the questions were not discussed or emphasized in class, and it felt really frustrating. It seemed unfair because it didn't reflect what I had actually learned. I think using a Table of Specifications (TOS) as a guide in creating tests would really help solve this problem. It would make sure that the guestions match the lessons learning outcomes, and cognitive skills we've practiced, so students are assessed fairly on what they truly know.

SHOW your Learning Artifacts

- Accomplished Observation Sheet

Learning Outcome	No. of Class Hours	Cognitive Level						Total
		Rem	Un	Ap	An	Ev	Cr	
1. **Lesson 1:** Force, Motion, and Newton's Laws Inertia and Equilibrium Acceleration and Force Newton's Laws of Motion Action-Reaction Forces	6	12	6	0	—	—	—	18
2. Lesson 2: Electricity and Electric Circuits Battery, Electric	7	6	0	15	—	—	—	21

	Current, and EMF Direct and Alternating Current Series Circuits Parallel Circuits Series-Parallel Circuits							
3.	Lesson 3: Electromagnetic Waves Electromagnetic Spectrum Frequency and Wavelength	2	4	2	0	—	—	—	6
Total		15	22	8	15	—	—	—	45

- Analysis

1. What parts must a TOS contain to ensure test content validity?
- A Table of Specification (TOS) must include the learning outcomes or competencies, content topics or subtopics, cognitive levels (e.g., remembering, understanding, applying), and the number of items or weight per topic and cognitive level. These components ensure the test covers all intended areas and accurately measures what students are expected to learn.

2. Why is there a need for several items per cognitive level?
- Having several items per cognitive level increases the reliability and fairness of the test. It allows students multiple opportunities to demonstrate their abilities, reduces the chance of guessing.and provides a clearer picture of their mastery of knowledge, skills, and higher-order thinking.

3. With OBE in mind, is it correct to put learning outcomes not topic in the first column? Why or why not?
- Yes, it is correct. Outcome-Based Education focuses on whether students achieve specific learning outcomes rather than simply covering topics. Placing learning outcomes in the first column ensures that the assessment aligns with what students are expected to know and be able to do.

4. Can a teacher have test with content validity even without making a TOS?

- Yes, a teacher can still create a test with content validity without a formal TOS. However, without a TOS, it is harder to systematically ensure that all learning outcomes are represented and that items are properly balanced across content and cognitive levels.

5. Complete the given TOS?
- To complete a TOS, a teacher lists all learning outcomes in the first column, identifies corresponding topics or subtopics, assigns cognitive levels for each item, determines the number of items per outcome and level, and calculates the percentages or weights. This ensures that the test fairly represents all intended learning objectives and cognitive skills.

- Reflection

I have experienced taking a test where many of the questions were not discussed or emphasized in class, and it felt really frustrating. It seemed unfair because it didn't reflect what I had actually learned. I think using a Table of Specifications (TOS) as a guide in creating tests would really help solve this problem. It would make sure that the guestions match the lessons learning outcomes, and cognitive skills we've practiced, so students are assessed fairly on what they truly know.

Activity 13.7

Computing Student's Grades based on DepEd Grading System

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject: **SCIENCE** Date:9/28/26

TARGET Your Intended Learning Outcome

- Compute student's grade based on DepEd's grading policy.
- State the new feature of the latest grading system in basic education

REVISIT the Learning Essentials

- With the implementation of the Enhanced Basic Education Program of 2013, more popularly known as the K to 12 Curriculum, came a new grading system of the Department of Education. Refer to Appendix A for more details.
- The latest grading system in basic education includes students' performance in written tests and performance tasks, with emphasis on the latter. The quarterly exam may be a combination of written test and performance task.

OBSERVE

A. Sample Students' Report Card

1. Secure a sample of a Students' Report Card from your Resource Teacher.

2. Study a sample of an unused Student's Report Card. Observe its contents.

3. Ask permission from your Resource Teacher for an interview with him/her and with a group student regarding the new grading system.

B. Interview of Resource Teacher

1. What are the new features of the latest grading system? What things are you required to do with this new grading system which you were not asked before?

2. Which do you prefer — the old or the new grading system? Why?

C. Interview of 5 Students

1. What do you like in the new grading system?

- The student likes the inclusion of performance tasks because these give students opportunities to improve their grades through projects, group work, and different activities.

2. Do you have problems with the new grading system. If there is, what?

- The student finds it stressful when several subjects require major performance tasks, video projects, and portfolios with the same deadline.

3. Does the new grading system give you a better picture of your performance? Why or why not?

- The student believes that the current grading system gives a better picture of performance because it does not only measure what students can memorize on paper but also shows how well they can apply what they have learned.

4. Which do you prefer - the old or the new grading system? Why?

- The student prefers the current grading system because it feels fairer and reduces competition among students.

D. Review of DepEd Order # 8, s. 2015

Read DepEd Order # 8 s. 2015. You may refer to https://www.deped.gov.ph/wp-content/uploads/2015/04/DO_s2015_08.pdf

Based on DepEd Order 8, 8. 2015, answer the following:

1. What are the bases for grading?

- The grades of learners are based on three components of summative assessment: Written Work, Performance Tasks, and Quarterly Assessment. Written Work measures how well learners can express their understanding in written form. Performance Tasks allow them to demonstrate and apply what they have learned, while the Quarterly Assessment measures their learning at the end of the quarter. The percentage assigned to each component depends on the grade level and subject.

2. How do you compute grades per quarter for Grades 1 to 10 and Grades "11 to 12. Give an example.

- The computation starts by getting the Percentage Score (PS) for each component:

PS = (Raw Score ÷ Highest Possible Score) × 100

The Percentage Score is then multiplied by the assigned weight to get the Weighted Score (WS). The weighted scores are added to get the Initial Grade, which is then transmuted to obtain the Quarterly Grade.

For Grades 11–12, the weights also depend on the type of subject and track. For example, SHS Core Subjects use 25% Written Work, 50% Performance Tasks, and 25% Quarterly Assessment.

Example for Grade 9 Science:

Suppose a learner gets:

Written Work = 85%

Performance Tasks = 90%

Quarterly Assessment = 80%

Since Science uses 40%-40%-20%:

Written Work: 85 × 0.40 = 34

Performance Tasks: 90 × 0.40 = 36

Quarterly Assessment: 80 × 0.20 = 16

Initial Grade = 34 + 36 + 16 = 86

After applying the required transmutation, the resulting Quarterly Grade is recorded in the report card.

3. How do you compute grades at the end of the school year?

- For Grades 1–10, the Final Grade for each learning area is computed by getting the average of the four quarterly grades:

Final Grade = (1st Quarter + 2nd Quarter + 3rd Quarter + 4th Quarter) ÷ 4

The General Average is then obtained by adding the Final Grades of all learning areas and dividing the sum by the total number of learning areas. The Final Grade and General Average are reported as whole numbers.

For Grades 11–12, the two quarterly grades in a semester are used to determine the Final Grade for that semester.

4. What descriptors and grading scale are used in reporting progress of learners?

- The following descriptors are used:

Grading Scale	Descriptors	Remarks
90-100	Outstanding	Passed
85-89	Very Satisfactory	Passed
80-84	Satisfactory	Passed
75-79	Fairly Satisfactory	Passed
Below 75	Did Not Meet Expectations	Failed

These descriptors provide a clearer description of the learner's level of performance instead of relying only on numerical grades.

5. What are the bases for learners' promotion and retention at the end of the school year?

- Promotion and retention are based on the learner's Final Grades in all learning areas. A learner with a Final Grade of at least 75 in all learning areas is promoted to the next grade level.

For Grades 4–10, if a learner does not meet expectations in not more than two learning areas, the learner must pass remedial classes for the failed learning areas to be promoted. If the learner does not meet expectations in three or more learning areas, the learner is retained in the same grade level.

For Grades 11–12, a learner must have a Final Grade of at least 75 in all learning areas in a semester to proceed to the next semester. Learners who fail prerequisite subjects must complete the required remedial learning opportunities before taking the higher-level subject.

6. What is the report on learners' observed values?

- The report on learners' observed values is the part of the report card that shows how learners demonstrate the school's and DepEd's core values in their behavior and daily activities. These values are reported using a non-numerical rating, rather than being included in the academic numerical grade. The ratings indicate how consistently the learner demonstrates the expected values.

The observed values are reported using:

AO – Always Observed

SO – Sometimes Observed

RO – Rarely Observed

NO – Not Observed

This allows the teacher to report not only the learner's academic performance but also the learner's development in terms of expected values and behavior.

E. Grade Computation

Show sample computations of a grade:

- In a subject of your choice from Grades 1 to 6 (if you are a future elementary teacher) in your specialization if you are a high school teacher)

Sample Computation – Grade 8 Science

Written Work: 85 × 40% = **34**
Performance Tasks: 90 × 40% = **36**
Quarterly Assessment: 80 × 20% = **16**

Initial Grade:
34 + 36 + 16 = **86**

Quarterly Grade:
86 → **91**

- Show the percentage contributions of written work, performance tasks and quarterly assessment. Then give the descriptor. Refer to DepEd Order # 8, s. 2015.

Grading Descriptors and Scale

The initial grades computed from these components are transmuted into final quarterly grades and matched with the following descriptive grading scale:

- **Outstanding: 90 – 100** (Passed)
- **Very Satisfactory: 85 – 89** (Passed)
- **Satisfactory: 80 – 84** (Passed)
- **Fairly Satisfactory: 75 – 79** (Passed)
- **Did Not Meet Expectations: Below 75** (Failed)

Analyze data and information gathered from the interview and from your interview of an unused Student's Report Card and the DepEd grading system.

1. Do teachers and students like the new grading system? Why or why not?

- Teachers and students have mixed reactions to the new grading system. According to Sir Rommel, teachers prefer the old grading system because it is familiar, consistent, and easier to understand. On the other hand, students generally like the new grading system because it is clearer, more balanced, and focuses on competencies. They appreciate that it gives specific

feedback, recognizes creativity and practical skills, and motivates them to participate actively in learning. Overall, while teachers may be more comfortable with the old system, students find the new system more engaging and reflective of their true abilities.

2. What are the good points of the new grading system according to teachers? according to students?

- Teachers: Although Sir Rommel prefers the old system, a good point is that the new grading system maintains consistency in evaluation, so teachers do not need to adjust their methods. It still emphasizes competency-based assessment, ensuring students are evaluated fairly.

3. What are teachers challenged to do by this new grading system?

- Teachers are challenged to maintain accurate documentation of students' written work, performance tasks, and quarterly assessments. Even though Sir Kim mentioned no major changes, the system still requires teachers to monitor competencies, provide specific feedback, and ensure that grades reflect both academic understanding and applied learning. They must also be consistent in applying the standards to ensure transparency and fairness.

4. Do you favor the distribution of percentages of written work, performance tasks, and | quarterly assessments?

- Yes, the distribution is fair and well-balanced because it considers multiple aspects of student learning. Written work evaluates knowledge and comprehension, performance tasks assess real-life application and creativity, and quarterly assessments measure mastery of competencies. This combination provides a holistic view of a student's abilities and ensures that grades are not based solely on exams but also on practical and meaningful demonstrations of learning.

5. Did you like the experience of computing grades? Why or why not?

- Yes, I liked the experience of computing grades because it gave me a better understanding of how each component contributes to the final grade. It helped me appreciate how grades reflect both academic performance and applied skills. Computing grades also made me more aware of how teachers assess progress and identify areas where students may need improvement. Overall, it was a valuable learning experience that connected theory from DepEd Order #8, s. 2015, with actual classroom practice

Episode 13 - Assessment OF Learning (Summative Assessment)

In an era where the emphasis is self-directed learning and demonstration of competencies - knowledge, skills, and values learned (outcomes-based education)- do grades matter?

- Grades still matter, and for me, they are one of the reasons that motivate and push me to study hard. But I also believe that what really counts is how much I understand, the skills I develop, and the values I practice along the way. Grades help me see where I'm doing well and where I need to improve, but I feel more focused on learning for growth rather than just for the score. They're useful as a guide, but my real goal is to truly master what I'm learning and take responsibility for my own progress.

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 13 - Assessment OF Learning (Summative Assessment)

Activity 13.8

Reporting Students' Performance

Resource Teacher: **ROMMEL B. MANANING JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject Area: **SCI**

TARGET Your Intended Learning Outcome

- State the reason(s) why grades must be reported to parents.
- Describe what must be done to make grade reporting meaningful.

REVISIT the Learning Essentials

- Grades fulfill their function if reported meaningfully to students and most of all to parents, our partners in the education of children.
- Grades are a measure of achievement, not necessarily IQ. A student may have high 1Q but not necessarily achieving or performing because of lack of motivation or other factors.

OBSERVE

Proceedings in a Card Distribution Day

1. Observe how cards are distributed on Card Distribution Day. Describe how cards are distributed.

N/A

2. Describe how the Resource Teachers communicated learners' assessment results and grades to parents.

N/A

3. Did parents raise questions or concerns? If yes, what were their questions/concerns?

N/A

4. How did the Resource Teacher handle their questions and concerns? What answers did he/ she give?

N/A

Interview with Resource Teacher

1. How do you give feedback to your students regarding their performance? When do you give feedback?

- When it comes to providing feedback, the teacher adjusts the approach depending on the needs and performance of the students. For students who need improvement, particularly in their behavior, participation, or overall performance, the teacher provides constructive feedback to help them recognize the areas they need to work on. The feedback is kept clear and encouraging so that students understand what they need to improve without feeling discouraged.

For academic performance, the teacher often uses positive reinforcement and gives compliments whenever students show progress, effort, or good performance. The teacher believes that recognizing students' achievements, even the small ones, can help boost their confidence and motivate them to continue doing their best. Through this approach, feedback becomes not only a way of correcting mistakes but also a means of encouraging students, building their self-confidence, and supporting their continuous growth and improvement.

2. How do you report students' performance to parents? Does the school have a regular way of reporting grades to parents?

- The teacher usually communicates students' behavior and academic performance to their parents or guardians during the scheduled release of report cards. This gives the teacher an opportunity to provide updates about the students' progress, classroom behavior, participation, and overall performance in

school. The teacher believes that regular communication with parents is important because it helps them become more aware of how their child is doing and how they can provide support at home.

However, when there is a concern that needs immediate attention, the teacher does not wait until the next report card distribution. There are times when the teacher personally contacts the parent or guardian and asks them to visit the school so they can discuss the matter properly. This usually happens when the concern involves behavior, repeated difficulties, or situations that may affect the student's learning and development. Through this approach, concerns can be addressed early and appropriate interventions can be discussed.

For academic grades, the teacher provides the report card and allows parents or guardians to review their child's performance. The teacher also informs them that they are always welcome to communicate or approach the teacher if they have questions, need clarification, or have concerns about the grades or their child's academic progress. In this way, the teacher maintains open communication with parents and gives them an opportunity to better understand and support their child's learning.

3. What problems on grade reporting did you encounter with parents? How did you address it/them?

- So far, the teacher has not encountered any major concerns or serious issues from parents regarding their child's performance. However, one of the common questions raised by parents is why their child received a relatively low grade. In such situations, the teacher explains the reasons behind the grade by referring to the student's performance in activities, assessments, participation, submission of requirements, and other components included in the grading process.

Interview with Students

1. Do you see the meaning of your grades in the School Report Card?

N/A

2. Does knowing your grade motivate you to work harder?

N/A

Interview with Parents

1. Does your child's Report Card give you a clear picture of how your child is performing?

N/A

2. If you were asked what else should be found in the Report Card, which one? Why?

3. Do you find the Card Distribution Day important? Why or why not?

N/A

4. Any suggestion on how to make Card Distribution more meaningful?

N/A

1. What were the most common issues raised on students' performance?

- The most common concern raised is why the students received a relatively low grade. The teacher explains this by referring to the student's performance in activities, assessments, participation, submission of requirements, and other components included in the grading process.

2. Based on your observations and findings, what practices must be

a) maintained and

- Open and regular communication with parents. The teacher should continue explaining students' grades and progress during report card distribution.
- Use of different grading components. Grades should continue to reflect activities, assessments, participation, submitted requirements, and overall performance rather than relying on only one measure.
- Early communication about concerns. When there are serious concerns about behavior or learning, contacting parents immediately should be continued so that appropriate support can be provided.

b) improved to make grades and reporting meaningful?

- Give clearer and more specific explanations of grades. Instead of simply stating the grade, the teacher can explain which areas contributed to it and what the student can improve.

- Provide feedback throughout the grading period. Parents and students should not have to wait for the report card to know about difficulties. Regular updates can help address concerns earlier.
- Make reporting more focused on student growth. Reports can include not only the student's grade but also their strengths, areas for improvement, and possible ways parents can support them at home.

1. Grades are often a source of misunderstanding. How should I do the reporting so that it will result to effective learning?

- Grades often become a source of misunderstanding because they are sometimes treated as mere numbers rather than tools for learning. Many students focus only on the final mark without understanding what it truly means or how it reflects their progress. This happens when teachers fail to provide descriptive feedback or are not transparent with criteria and rubrics. Without clear explanations, grades lose their purpose and can discourage learners instead of motivating them. To address this, teachers must go beyond simply recording scores. Providing descriptive feedback helps students understand why they received a certain grade and how they can improve. Likewise, being transparent with rubrics ensures fairness and clarity in assessment. When learners know the standards and expectations, they become more engaged and responsible for their learning. Therefore, meaningful grade reporting should not just summarize performance it should serve as a guide that fosters reflection, growth, and deeper understanding.
