On Teacher's Philosophy of Education

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 16 – On Teacher's Philosophy of Education

SPARK Your Interest

One thing asked of teacher applicants in the Department of Education is to write their philosophy of education. This means that they have to write their concept of the nature of the learner, how that learner learns, and how that learner ought to live to live life meaningfully. Based on these philosophical concepts, the teacher applicants describe how they ought to relate to the learner, what to teach, and how to teach so that the learner learns and lives life happily and meaningfully.

TARGET Your Intended Learning Outcome

At the end of this episode, I must be able to:

- determine prevailing philosophies of education based on DepEd Vision and Mission statements, core values and mandate, the K to 12 Curriculum Framework and Guide, and RA 10533;
- cite teacher's teaching behaviors and the philosophies of education on which these behaviors are founded; and
- articulate my philosophy of teaching.

REVISIT the Learning Essentials

We are beneficiaries of a rich philosophical heritage passed on to us by great thinkers of the past and of the present. The way teachers relate to learners and the way they teach are anchored on philosophies of education.

Basic documents such as the vision and mission statements, core values and mandate of the Department of Education and the features of the K to 12 Curriculum as contained in Section 3 of RA 10533 and the K to 12 Curriculum Guide are manifestations or expressions of the philosophies of education of the country. They state the standards and the outcomes of education towards which all curricular activities and teaching-learning should be directed.

Episode 16 – On Teacher's Philosophy of Education

OBSERVE, ANALYZE, REFLECT

Activity 16.1

Analyzing DepEd's Philosophy of Education

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject Area: **SCIENCE**
Date:**09/21/26**

OBSERVE

- Determine prevailing philosophies of education based on DepEd Vision and Mission statements, core values and mandate, and the K to 12 Curriculum Framework and Guide.
- Study the DepEd Vision and Mission statements, Core Values, and Mandate.
- Read the features of the K to 12 Curriculum based on the Ktol2 Curriculum Framework and Guide and Sec 5 of RA 10533.
- Accomplish the Table below by answering this question: Which philosophies are expressed?
- Cite relevant statements to back up an identified philosophy of education. You are given an example.

Philosophies of Education	Which philosophies are expressed in the DepEd Vision, Mission Statements, Core Values, Mandate? Give proof.	Which philosophies are expressed in the K to 12 Curriculum Framework and Guide and Sec 5 of RA 105337? Give proof.
1. Essentialism — teach mastery of the basics; curriculum is prescribed; subject matter -centered there are universal, objective values;	Essentialism - The core values of maka-Diyos, maka-tao, maka-kalikasan and makabansa show that DepEd essentialist. DepEd believes in unchanging values that need to be inculcated.	The K to 12 curriculum emphasizes the development and mastery of important knowledge, skills, and competencies. This was seen when the teacher made sure

inculcate values in the subject matter.		that students understood the basic Science concepts.
2. Perennialism — teach those that last, the classics; there are universal values; inculcate these universal, objective values	The DepEd Mission talks about providing quality education based on lifelong values. which reflects the idea of teaching what lasts through time	The K-12 Framework's aim to nurture lifelong learners who apply enduring knowledge and values demonstrates perennialism.
3. Progressivism - very child-centered; teach those that interest the child; one learns by experience; learners learn by doing so teacher 's teaching is experiential; values are subjective; no inculcation of values since they are subjective; instead teachers help students clarify their values	DepEd's Vision highlights learner-centered education, where students are active participants in their own growth.	The K-12 Framework highlights developing lifelong learners who apply enduring knowledge and values, showing that true education should stand the test of time.The K-12 Curriculum promotes discovery and learning by doing through performance tasks, projects, and real-life applications.
4. Reconstructionism - school is agent of change; schooling is preparing students for the social changes; teaching is involving the students in discussions of moral dilemmas	DepEd aims to produce citizens who help build the nation, proving that education is seen as an agent of social change.	The K-12 Framework encourages social involvement, preparing learners to respond to community and global challenges.
5. Existentialism - Teachers teach learners to make a choice, to make decisions and not merely to follow the crowd; one who does not make a choice and so simply follow others do not leave meaningful life	DepEd aims to produce citizens who help build the nation, proving that education is seen as an agent of social change.	RA 10533 stresses learner-centered education, giving students space to express themselves and form personal meaning.
6. Pragmatism - That which is useful, that which is practical and that which works is what is good; that which is efficient and effective is that which is good. 6.g. showing a video clip on mitosis is more efficient and more effective and therefore more practical than teacher coming up with a visual aid by drawing mistosis on a cartolina or illustration board	The Mission empowers learners to make responsible choices that will lead them to a meaningful and productive life.	The K-12 Curriculum values useful, hands-on experiences and focuses on employable and life-ready skills
7. Rationalism - emphasizes the development of the learners'	DepEd promotes relevant and practical education that	The K-12 Framework develops reasoning and analytical

reasoning powers; knowledge comes though reason; teacher must develop the reasoning power of the learner	helps learners apply what they know in real-world settings.	thinking through inquiry-based and problem-solving tasks.
8. Utilitarianism - what is good is that which is most useful (that which brings happiness) to the greatest number of peoples;	DepEd envisions learners who think critically and reason soundly in making decisions.	The curriculum aims to produce citizens who can contribute to the welfare and happiness of society.
9. Empiricism - source of knowledge is through the senses; teacher must involve the senses in teaching-learning	The core values encourage actions that benefit others and promote the good of many.	The K-12 Curriculum uses experiments and real-life performance tasks to let students learn through their senses.
10. Behaviorism - behavior is shape deliberately by forces in the environment and that the type of person and actions desired can be the product of design; behavior is determined by others, rather than by person's own free will; teacher must carefully shape desirable behavior; drills are commonly used to enhance learning. rewards reinforce learning.	DepEd supports experiential and sensory learning through laboratory work, observation, and field exposure.	K-12 uses structured drills, formative assessments, and positive feedback to shape desired learning behaviors.
11. Constructivism —Learners are capable of constructing knowledge and meaning; teaching 4earning therefore is constructing knowledge and meaning; teacher does not just "tell" or dictate but asks learners for knowledge they construct and meaning of lesson	DepEd promotes discipline and good conduct by reinforcina positive behavior in schools.	The K-12 Framework promotes collaboration, inquiry, and reflection where students construct their own knowledge

Activity 16.2

Articulating My Personal Philosophy of Teaching

FS 1 FIELD STUDY

OBSERVATIONS OF TEACHING -LEARNING IN ACTUAL SCHOOL ENVIRONMENT

Episode 16 – On Teacher's Philosophy of Education

Resource Teacher: **ROMMEL B. MANINANG JR.** Teacher's Signature: 

School: **ABAÑO LABORATORY SCHOOL** Grade/Year Level: **9** Subject Area: **SCIENCE** Date: **9/21/26**

- Observe how a teacher relates to every learner and how he/she proceeds with her teaching.
- Accomplish this Observation Sheet.

Here are philosophies of education. Find out which philosophies were manifested in class by observing what and how teacher teaches and relates to learners.

Philosophies of Education	Teaching Behavior (State what the teacher said, taught or did).
1. Essentialism — teach mastery of the basics; curriculum is prescribed; subject matter centered there are universal, objective values; inculcate values; subject	The teacher focused on the important concepts of the Science lesson and made sure that students understood the basic ideas before proceeding.
2. Perennialism — teach those that last, the classics; there are universal values; inculcate these universal, objective values	He emphasized concepts that are important and useful even beyond the specific lesson. He guided students toward understanding rather than just memorizing.
3. Progressivism - very child-centered; teach those that interest the child; one learns by experience; learners learn by doing so teacher teacher's teaching is experiential; values are subjective; no inculcation of values since they are subjective; instead teachers help students clarify their values	He allowed students to discuss the lesson with their classmates and create models. This made the lesson more active and student-centered.
4. Reconstructionism	He related the lesson to real-life situations, showing students that Science is not only about concepts but also about things they can observe and experience in their surroundings.
5. Existentialism	He gave students the freedom to answer questions and share their own ideas during the discussion.

6. Pragmatism	He used models and activities because these were practical ways to help students understand the topic better.
7. Rationalism - emphasizes the development of the learners' reasoning powers: knowledge comes though reason; teacher must develop the reasoning power of the learner	He asked oral questions that encouraged students to think, reason, and explain their answers.
8. Utilitarianism - what is good is that which is most useful (that which brings happiness) to the greatest number of peoples;	He used differentiated teaching strategies that helped the majority of the class understand and participate in the lesson.
9. Empiricism - source of knowledge is through the senses; teacher must involve the senses in teaching-learning	He let students observe, discuss, and create models so they could learn from actual experience.
10. Behaviorism - behavior is shaped deliberately by forces in the environment and that the type of person and actions desired can be the product of design; behavior is determined by others, rather than by person's own free will; teacher must carefully shape desirable behavior: drills are commonly used to enhance learning, rewards reinforce learning.	He used praise, plus points, privileges, and rewards to reinforce good behavior and participation.
11. Constructivism — Learners are capable of constructing knowledge and meaning; teaching —learning therefore is constructing knowledge and meaning; teacher does not just "tell" or dictate but asks learners for knowledge they construct and meaning of lesson	He gave students opportunities to discuss and explain the topic to their classmates. Through these activities, students were able to build their own understanding of the lesson.
12. Other Philosophies	

ANALYZE

1. Based on your findings and observations in Activity 16.1 and Activity 16.2, which philosophies of education are dominant in Philippine basic schools? Why do you say so?

- Based on my observations, progressivism, behaviorism, and constructivism are commonly seen in the classroom. Teachers encourage students to participate, work with others, and learn through activities. At the same time, positive reinforcement such as praise, rewards, and points is used to encourage good behavior and participation. I also observed that students are given opportunities to construct their own understanding through discussions, questioning, and activities.

2. If there is one philosophy that schools and teachers should give more attention to, what should that be and why?

- For me, constructivism should be given more attention because students learn better when they are actively involved in the lesson. Instead of only listening to the teacher, they should be given opportunities to ask questions, share ideas, create models, and connect the lesson to their own experiences. As I observed in the Science class, students became more involved when they were given a chance to participate and discuss the topic themselves.

What is your philosophy of teaching? This describes what you believed you should teach, how you should teach and how you should relate to others in school — with the learners, your colleagues, your superiors and all other stakeholders. Write them down. This is your title, "My Philosophy of Teaching."

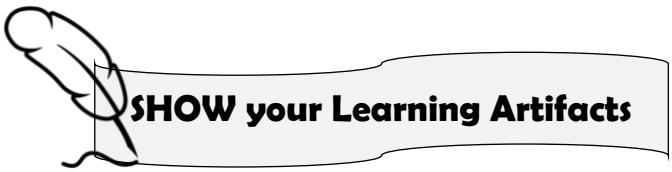

My Philosophy of Teaching

I believe that the learners are the center of learning because education should always consider their needs, abilities, interests, and experiences. Learning depends on the learners, so they should be my priority as a future teacher. I should create a classroom where they feel respected, comfortable, and encouraged to participate. I also believe that every learner is different, so I should be patient and flexible in the way I teach them. My role is not only to give information but also to help learners become confident and responsible in their own learning.

As a future science teacher, I believe that learners understand lessons better when they are given opportunities to experience and explore things for themselves. Science should not only be about memorizing concepts from a book. Learners should be able to observe, investigate, perform activities, create models, and connect what they learn to real-life situations. Through these experiences, they can develop curiosity and understand that science is something they can see and apply in their everyday lives.

I believe that experiences teach us lessons that we cannot always learn from books or lectures. When we experience something ourselves, we are able to understand its meaning more deeply and remember it better. As a teacher, I want to give my learners meaningful experiences where they can learn from both their successes and mistakes. I believe that these experiences can help them grow not only academically but also as individuals.

And lastly, I believe that as a future teacher, I have a responsibility to guide and support not only my learners but also the people I work with. I should build good relationships with my colleagues through cooperation, respect, and sharing ideas. I should also communicate and work with my superiors and parents because education becomes more effective when everyone works together. I may not be able to change the whole education system by myself, but I believe that through my actions, cooperation, and commitment, I can contribute to creating a better learning environment for everyone.
